

Corporate Overview

NETWORK ACCESS. CONTROLLED.

Your network grows at the speed of point and click, serving users you know and trust...and maybe some you don't.

Your priority is to protect your company's assets while making sure your operations run smoothly and your users remain productive.

Your IT security policies help to distinguish who can and can't access your network while minimizing management overhead and employee downtime.

NETWORK ACCESS CONTROL. IT'S A COMPLEX TASK... SIMPLIFIED BY FORESCOUT.

At ForeScout, we've taken the pain and uncertainty out of NAC with CounterACT: a clientless NAC solution that simplifies policy compliance management. With CounterACT, every device on your network is identified and examined. Every deviation from policy is caught and addressed. Every day, all night, in real time. For every location in your global enterprise.

ForeScout's CounterACT: Network Access Control and Policy Compliance Management. Simplified.

ABOUT FORESCOUT

ForeScout is the leading provider of clientless network access control (NAC) and policy compliance management for the global enterprise. We introduced our flagship CounterACT family of products in 2005, helping to pioneer and evolve the NAC industry. Our technology was developed in close partnership with our customers, and is differentiated by its ability to simplify the arduous tasks of access control and policy management. Today, CounterACT is trusted and proven in over 500 Fortune-1000 enterprises and government/military agencies worldwide, where it serves to enforce security-policy compliance and enable streamlined business processes.

AWARD-WINNING TECHNOLOGY

CounterACT has received both the Gold Medal-Reader's Trust Award for new technology by Information Security Magazine a perfect five-star evaluation rating from SC Magazine, and is recognized as "the top NAC appliance vendor" by Network World, surfacing as the winner in its rigorous group test of leading NAC offerings.

CounterACT combines clientless network access control (NAC) and signatureless intrusion prevention to ensure all connected and connecting devices are in compliance with network security policies and are free of self-propagating threats. CounterACT seamlessly integrates into any network environment without requiring costly upgrades or infrastructure changes, and enables enterprises to tailor enforcement actions to match the level of policy violations, ensuring user disruption only occurs when warranted by your IT security team.

In addition to traditional security issues, today's enterprises are dealing with the influx of vulnerabilities introduced by contractors, guests and mobile/home employees who are able to bypass physical security and gain network connection inside the perimeter defenses. CounterACT solves this problem by enforcing network security policies across all network devices, both managed and unmanaged, including desktops and laptops as well as non-OS devices such as VoIP phones, handhelds, network printers and other equipment, without the need for a software agent of any kind.

EXECUTIVES

T. Kent Elliott, CEO

Kent brings a wealth of international executive management experience to ForeScout, contributing significantly to the company's consistent growth and market advancement. Prior to joining ForeScout, Kent held international executive positions in the United States, Canada, Asia and Europe, including a tenure as Senior Vice President and General Manager of Nokia Internet Communications.

Gord Boyce, President

Gord is the driving force behind ForeScout's strategic vision and global sales organization. In his tenure at ForeScout, he has consistently increased company revenues year-over-year, nearly doubling growth in 2007. Prior to joining ForeScout, Gord spent over seven years at Nokia in senior sales management positions, including Vice President of Sales and Marketing for the America's Enterprise Solutions business group.

FOUNDERS

Hezy Yeshurun, Ph.D, Chairman

Oded Comay, CTO

Doron Shikmoni, Co-Founder

ForeScout was founded by network security experts and a world-renowned algorithmic mathematician. Their practical and cutting-edge research experience has produced innovative, business-centric technology that is on-pace with the security requirements of the world's most sophisticated global networks. ForeScout holds a US patent for its unique threat detection technology, and has patents pending for several additional innovations.
