

External Classifier Plugin 2.2.2

CounterACT Update

Release Notes

Version Information

- External Classifier Plugin Version 2.2.2.
- Customers running the following CounterACT versions who have an active Maintenance Contract for their CounterACT devices can install the plugin.
 - CounterACT version 7.0.0. It is recommended to install the latest Hotfix.

What's New

This version contains important fixed issues. See [Fixed Issues](#). See [Previous Releases](#) for information about previous releases of this plugin. See [How to Install](#) for installation details.

Accessing Updates Made after This Release

New features or fixes may be provided after this release. These items will be made available as Beta releases to the upcoming plugin version until the final version is posted on the ForeScout customer support page. You can access information about Beta releases for the upcoming version at:

<http://updates.forescout.com/support/files/plugins/extcls/Updates.pdf>

In addition, you can contact the ForeScout Beta Manager at beta@forescout.com to request the Beta plugin update with the fixes.

Fixed Issues

This section describes the issues fixed for this release.

Issue	Description
56849	Plugin parsing of MAC addresses from large LDAP query results is significantly slow.
56766	When a stopped CounterACT Appliance restarted, the plugin did not immediately detect endpoints that matched the external classifier policy. Plugin detection of the relevant endpoints only occurred at the CounterACT policy recheck interval.
56675	When the External Classifier MAC address file downloaded by the plugin (FTP or LDAP), is large and has frequent content changes, redundant network traffic load might result between the Enterprise Manager and Appliances.
56053	Detected endpoints, whose MAC address no longer appeared in the latest, downloaded External Classifier file, continued to be displayed in the Console (NAC tab > Detections > endpoint > Profile tab) with their previously assigned External Classifier property value that was no longer applicable. Only at the next policy recheck interval was the External Classifier property value of these endpoints correctly updated/cleared (instead of being done immediately upon

CounterACT Update

Release Notes

Issue	Description
	plugin processing of that latest, downloaded External Classifier file).
54699	If an Appliance was not connected to the Enterprise Manager when the plugin on another Appliance distributed newly imported data, the plugin on the first Appliance repeatedly restarted when the first Appliance came on line.

How to Install

This plugin can be downloaded from the CounterACT Web site. Perform the following steps to download from the Web site and then install this plugin on the Console.

To download and install the plugin:

1. Navigate to the [Customer Support Plugins](#) page.
2. Save the plugin.
3. Select **Options** from the CounterACT Console toolbar.

4. Select the **Plugins** folder.
5. In the **Plugins** pane, select **Install**.
6. Install the plugin from the location where you saved it.

For More Information

Refer to the plugin configuration guide for more information about the plugin.

To access the guide:

1. Install the plugin and select it from the **Plugins** pane.
2. Select **Help** from the **Plugins** pane.
