

Version Information for eyeExtend for VMware Carbon Black 1.3 Release

The following table lists the Forescout platform version that works with each version covered by this guide.

Version	Forescout Platform Version
1.3	Minimum versions: 8.1.x and 8.2

Requirements for eyeExtend for VMware Carbon Black 1.3

- A module license for Forescout eyeExtend for VMware Carbon Black®. See [Forescout eyeExtend \(Extended Module\) Licensing Requirements](#) for details.
- Core Extensions Module with the IOC Scanner Plugin.

Supported Vendor Requirements

- For information about the vendor models (hardware/software) and versions (product/OS) that are validated for integration with this Forescout component, refer to the [Forescout Compatibility Matrix](#).

Forescout eyeExtend (Extended Module) Licensing Requirements

This Forescout eyeExtend module requires a valid license. Licensing requirements differ based on which licensing mode your deployment is operating in:

- [Per-Appliance Licensing Mode](#)
- [Flexx Licensing Mode](#)

To identify your licensing mode:

- From the Console, select **Help > About Forescout**.

Per-Appliance Licensing Mode

When installing the module, you are provided with a 90-day demo license.

If you would like to continue exploring the module before purchasing a permanent license, you can request a demo license extension. Consult with your ForeScout representative before requesting the extension. You will receive email notification and alerts at the Console before the demo period expires.

To continue working with the module after the demo period expires, you must purchase a permanent module license.

Demo license extension requests and permanent license requests are made from the Console.

- 📄 *This module may have been previously packaged as a component of an Integration Module which contained additional modules. If you already installed this module as a component of an Integration Module, you can continue to use it as such. Refer to the section about module packaging in the ForeScout Administration Guide for more information.*

Requesting a License

When requesting a demo license extension or permanent license, you are asked to provide the device *capacity* requirements. This is the number of devices that you want this license to handle. You must define at least the number of devices currently detected by the ForeScout platform. You can request a license that handles more to ensure that you are licensed for support on additional devices as your deployment grows.

Enter this number in the **Devices** pane of the Module License Request wizard, in the Console Modules pane.

To view the number of currently detected devices:

1. Select the **Home** tab.
2. In the Views pane, select the **All Hosts** folder. The number in parentheses displayed next to the **All Hosts** folder is the number of devices currently detected.

Flexx Licensing Mode

When you set up your Forescout deployment, you must activate a license file containing valid licenses for each feature you want to work with in your deployment, including eyeExtend modules. After the initial license file has been activated, you can update the file to add additional eyeExtend licenses or change endpoint capacity for existing eyeExtend modules. For more information on obtaining eyeExtend licenses, contact your Forescout sales representative.

No demo license is automatically installed during system installation.

License entitlements are managed in the [Forescout Customer Portal](#). After an entitlement has been allocated to a deployment, you can activate or update the relevant licenses for the deployment in the Console.

Each eyeExtend license has an associated capacity, indicating the number of endpoints the license can handle. The capacity of each eyeExtend license varies by module but does not exceed the capacity of the Forescout eyeSight license.

Integration Modules, which package together groups of related licensed modules, are not supported when operating in Flexx Licensing Mode. Only eyeExtend modules, packaging individual licensed modules are supported. The eyeExtend Connect Module is an eyeExtend module even though it packages more than one module.

More License Information

For more information on eyeExtend (Extended Module) licenses:

- **Per-Appliance Licensing.** Refer to the *ForeScout Administration Guide*.
- **Flexx Licensing.** Refer to the *Flexx Licensing How-to Guide*.

You can also contact your ForeScout sales representative for more information.

About the eyeExtend for VMware Carbon Black 1.3 Release

This topic describes updates and important information related to the component delivered in this version. This release also includes enhancements and fixes provided in previous versions. See [Previous Releases](#).

Feature Enhancements

Carbon Black has been renamed to VMware Carbon Black. The name change is reflected in the graphical user interface and the eyeExtend module documentation.

The following products have also been renamed in the GUI and the documentation:

- Carbon Black Protection is now VMware Carbon Black App Control
- Carbon Black Response is now VMware Carbon Black EDR

The following tabs have also been renamed:

- Carbon Black Response Connections is now EDR Connections
- Carbon Black Protection Connections is now App Control Connections

The following policy templates have also been renamed:

- Carbon Black Agents Installed is now VMware Carbon Black Agents Installed
- Carbon Black Endpoint Threat Hunting is now VMware Carbon Black Endpoint Threat Hunting
- Carbon Black Network Threat Hunting is now VMware Carbon Black Network Threat Hunting

In the VMware Carbon Black Agents Installed policy template, the group names for the Add to Group action have also been renamed:

- Carbon Black Protection and Response is now VMware Carbon Black App Control and EDR
- Carbon Black Protection is now VMware Carbon Black App Control
- Carbon Black Response is now VMware Carbon Black EDR
- No Carbon Black is now No VMware Carbon Black

However, if you have an existing Carbon Black Agents Installed policy configured, you will continue to see the existing group names in the Add to Group action unless you do a fresh installation.

Fixed Issues

There are no fixed issues for this version of Forescout eyeExtend for VMware Carbon Black.

Known Issues

This section describes the known issues for this version of Forescout eyeExtend for VMware Carbon Black.

Defect #	Description
CB-71	Forescout eyeExtend for VMware Carbon Black does not support Certification Compliance mode. For information about this mode, refer to the <i>Forescout Installation Guide</i> .

More Release Information

This section provides additional release information.

Rollback Support

Rollback is not available for this module. This means that if you upgrade to this module version and the module does not operate as expected, you cannot roll it back to a previous release.

Previous Releases

Installing this release also installs fixes and enhancements provided in the releases listed in this section. To view Release Notes of previous version releases, see:

Install the eyeExtend for VMware Carbon Black Module

This topic describes how to download and install the module.

To install the module:

1. Navigate to the Downloads page on the [Forescout Customer Support Portal](#).
2. Download the module .fpi file.
3. Save the file to the machine where the Console is installed.
4. Log into the Console and select **Options** from the **Tools** menu.
5. Select **Modules**. The Modules pane opens.
6. Select **Install**. The Open dialog box opens.
7. Browse to and select the saved module .fpi file.

8. Select **Install**. The Installation screen opens.
9. Select **I agree to the License Agreement** to confirm that you have read and agree to the terms of the License Agreement and select **Install**. The installation cannot proceed unless you agree to the license agreement.
 -  *The installation begins immediately after selecting Install and cannot be interrupted or canceled.*
 -  *In modules that contain more than one component, the installation proceeds automatically one component at a time.*
10. When the installation completes, select **Close** to close the window. The installed module is displayed in the Modules pane.
 -  *Some components are not automatically started following installation.*
