About IBM QRadar Integration

The Forescout platform integrates with IBM® QRadar® SIEM servers to provide complete visibility of network endpoints, including unmanaged endpoints. QRadar integration lets you send policy status and selected host information from the Forescout platform to QRadar SIEM servers and trigger Forescout platform actions based on SIEM messages.

Use Cases

This section describes important use cases supported by this Forescout eyeExtend for IBM QRadar. To understand how this module helps you achieve these goals, see About this Module.

- Visualization of Endpoint Compliance Status & Connectivity
- Agent Health and Compliance for Windows
- Generate IBM QRadar Offense to Drive Forescout platform Action
- Right-click to Trigger Forescout platform Action
- Continuous Posture Tracking

Visualization of Endpoint Compliance Status & Connectivity

An IBM QRadar security administrator can monitor the current security posture on the IBM QRadar dashboard as per the configurations of different security solutions deployed. The security administrator can add Forescout platform widgets to the dashboard. These widgets cover the following visualization scenarios:

- Endpoint compliance status summaries
- Registered corporate users vs. guests
- Device types in the network
- Patterns of network access over time

Agent Health and Compliance for Windows

An IBM QRadar security administrator can ensure that the IBM QRadar WinCollect agent is installed and functioning properly on Windows endpoints within the network. An IBM QRadar WinCollect agent is a Windows Log Collection Agent, a stand-alone Windows application that is installed on both the IBM QRadar machine and the Windows host to allow IBM QRadar to collect Windows-based events.

Generate IBM QRadar Offense to Drive Forescout platform Action

An organization uses a network firewall to detect targeted Denial of Service (DOS) attacks on their web applications. The same organization also has IBM QRadar SIEM to collect and aggregate logs from the Forescout platform, firewall, and web
applications. When IBM QRadar detects a targeted DOS attack via firewall log correlation, an Offense is generated. The security administrator would then have the source of the attack automatically blocked by the firewall to prevent further disruption of service to the application(s) on the network.

**Right-click to Trigger Forescout platform Action**

In QRadar, you can right-click on any IP address/MAC field to send action type to the Forescout platform. The Forescout platform sets properties and triggers policies to take action. For more information, refer to the *Forescout App for IBM QRadar How-To-Guide*.

**Continuous Posture Tracking**

In Forescout eyeExtend for IBM QRadar, the operator can add widgets into the QRadar Dashboard. This gives an overall, big-picture view of device types, compliance status, registered corporate/guest status and network patterns on the network. For more information, refer to the *Forescout App for IBM QRadar How-To-Guide*.

**Connecting Appliance Option added to Configuration Setup**

When adding a QRadar SIEM server, the operator can select the CounterACT® Appliance to communicate between the IBM QRadar SIEM server and the assigned CounterACT devices. For more information, see *Define Target IBM QRadar SIEM Servers*.

**Additional IBM QRadar Documentation**

Refer to online documentation for more information about the IBM QRadar solution:

**About this Module**

The Forescout platform integrates with IBM QRadar SIEM servers to provide complete visibility of network endpoints, including unmanaged endpoints. IBM QRadar integration lets you send policy status and selected host information from the Forescout platform to IBM QRadar SIEM servers and trigger Forescout platform actions based on SIEM messages.

Forescout eyeExtend for IBM QRadar integrates the Forescout platform and IBM QRadar so that you can:

- Use policies and actions provided by Forescout eyeExtend for IBM QRadar to regularly push endpoint data to IBM QRadar. See details of the *Send SIEM Updates* policy template.
- View Forescout platform data in a dedicated, customizable IBM QRadar dashboard. See *Integrate the Forescout Functionalities into IBM QRadar*.
Define Forescout platform policies that respond to IBM QRadar offenses. See Action on Offense by Description and Action on Offense by Credibility and Severity.

Configure IBM QRadar to send offenses to the Forescout platform based on custom search or report results. Offenses can combine data from multiple sources. See Send Data from the Forescout platform to IBM QRadar.

It is suggested you install and configure both the Forescout platform and IBM QRadar to work with the features described in this document. For example, Forescout platform policies and actions provided by Forescout eyeExtend for IBM QRadar are used to populate IBM QRadar with Forescout platform data.

**How It Works**

Two components are installed to support this integration:

- Forescout eyeExtend for IBM QRadar is installed in the Forescout platform.
- Forescout App for IBM QRadar is installed within IBM QRadar.

The result is full bi-directional integration. The Forescout platform can send a dynamic list of property, policy, and event information to IBM QRadar, and IBM QRadar can send offenses and other messages to the Forescout platform.

IBM QRadar search uses data from the Forescout platform and other sources to detect patterns that indicate threats.

Forescout eyeExtend for IBM QRadar submits offenses generated by IBM QRadar to the Forescout platform, where it parses the offenses into host properties.

Forescout platform policies examine these properties to identify endpoints in need of remediation.

**Communicate Host and Policy Status**

- **Policy-triggered reporting**: The Forescout platform sends data to IBM QRadar when the conditions of a policy are met.
- **Update-triggered reporting**: The Forescout platform sends data to IBM QRadar when there is a change in policy or host status.
- **Scheduled reporting**: The Forescout platform sends data to IBM QRadar at regular intervals, independent of management policies.

**What to Do**

Perform the following to carry out the integration:

- Verify that requirements are met. See Requirements for details.
- Download and install Forescout eyeExtend for IBM QRadar from the Forescout website. See Install the Module for details.
- Define target IBM QRadar SIEM servers, and assign CounterACT devices to them. See Define Target IBM QRadar SIEM Servers for details.
• Define actions in Forescout platform policies that report data to IBM QRadar servers. See Policy Actions.

Requirements
This section describes:

• Forescout Requirements
• Forescout eyeExtend (Extended Module) Licensing Requirements
• 3rd-Party Vendor Requirements

Forescout Requirements
This module requires the following Forescout releases and other components:

• Forescout version 8.1.
• A module license for Forescout eyeExtend for IBM QRadar. See Forescout eyeExtend (Extended Module) Licensing Requirements.
• Core Extensions Module version 1.1 with the Syslog Plugin running.

About Support for Dual Stack Environments
The Forescout platform detects endpoints and interacts with network devices based on both IPv4 and IPv6 addresses. However, IPv6 addresses are not yet supported by this module. The functionality described in this document is based only on IPv4 addresses. IPv6-only endpoints are typically ignored or not detected by the properties, actions, and policies provided by this module.

Forescout eyeExtend (Extended Module) Licensing Requirements
This Forescout eyeExtend product requires a valid license. Licensing requirements differ based on which licensing mode your deployment is operating in:

• Per-Appliance Licensing Mode
• Flexx Licensing Mode

To identify your licensing mode:
• From the Console, select Help > About ForeScout.
Per-Appliance Licensing Mode

When installing the module, you are provided with a 90-day demo license. If you would like to continue exploring the module before purchasing a permanent license, you can request a demo license extension. Consult with your Forescout representative before requesting the extension. You will receive email notification and alerts at the Console before the demo period expires.

To continue working with the module after the demo period expires, you must purchase a permanent module license.

Demo license extension requests and permanent license requests are made from the Console.

This module may have been previously packaged as a component of an Integration Module which contained additional modules. If you already installed this module as a component of an Integration Module, you can continue to use it as such. Refer to the section about module packaging in the Forescout Administration Guide for more information.

Requesting a License

When requesting a demo license extension or permanent license, you are asked to provide the device capacity requirements. This is the number of devices that you want this license to handle. You must define at least the number of devices currently detected by the Forescout platform. You can request a license that handles more to ensure that you are licensed for support on additional devices as your deployment grows.

Enter this number in the Devices pane of the Module License Request wizard, in the Console Modules pane.
To view the number of currently detected devices:

1. Select the Home tab.

2. In the Views pane, select the All Hosts folder. The number in parentheses displayed next to the All Hosts folder is the number of devices currently detected.

**Flexx Licensing Mode**

When you set up your Forescout deployment, you must activate a license file containing valid licenses for each feature you want to work with in your deployment, including eyeExtend products. After the initial license file has been activated, you can update the file to add additional eyeExtend licenses or change endpoint capacity for existing eyeExtend products. For more information on obtaining eyeExtend licenses, contact your Forescout sales representative.

![Example Module License Request - Step 3 of 4](image)

- No demo license is automatically installed during system installation.

License entitlements are managed in the Forescout Customer Portal. After an entitlement has been allocated to a deployment, you can activate or update the relevant licenses for the deployment in the Console.

Each eyeExtend license has an associated capacity, indicating the number of endpoints the license can handle. The capacity of each eyeExtend license varies by module but does not exceed the capacity of the Forescout eyeSight license.
Integration Modules, which package together groups of related licensed modules, are not supported when operating in Flexx Licensing Mode. Only eyeExtend products, packaging individual licensed modules are supported. The Open Integration Module is an eyeExtend product even though it packages more than one module.

More License Information
For more information on eyeExtend (Extended Module) licenses:

- **Per-Appliance Licensing.** Refer to the Forescout Administration Guide.
- **Flexx Licensing.** Refer to the Flexx Licensing How-to Guide.

You can also contact your Forescout sales representative for more information.

3rd-Party Vendor Requirements

- IBM QRadar version 7.2.8
- Verify connectivity between the Forescout platform and target IBM QRadar servers on the configured TCP or UDP port. The default port is 514.
- Forescout eyeExtend for IBM QRadar has been tested using the following browsers:

<table>
<thead>
<tr>
<th>Web browser</th>
<th>Supported versions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mozilla Firefox</td>
<td>45.2 Extended Support Release</td>
</tr>
<tr>
<td>64-bit Microsoft Internet Explorer with</td>
<td>11.0</td>
</tr>
<tr>
<td>Microsoft Edge mode enabled.</td>
<td></td>
</tr>
<tr>
<td>Google Chrome</td>
<td>Latest</td>
</tr>
</tbody>
</table>

- For updates or changes to QRadar-supported browsers, refer to: [https://www.ibm.com/support/knowledgecenter/SS42VS_7.2.8/com.ibm.qradar.doc/c_shi_browser_support_gs.html](https://www.ibm.com/support/knowledgecenter/SS42VS_7.2.8/com.ibm.qradar.doc/c_shi_browser_support_gs.html)

Install the Module

To install the module:

1. Navigate to one of the following Forescout download portals, depending on the licensing mode your deployment is using:
   - **Product Updates Portal** - **Per-Appliance Licensing Mode**
   - **Customer Portal, Downloads Page** - **Flexx Licensing Mode**

To identify your licensing mode, select Help > About ForeScout from the Console.

2. Download the module .fpi file.

3. Save the file to the machine where the Console is installed.
4. Log into the Console and select **Options** from the **Tools** menu.
5. Select **Modules**. The Modules pane opens.
6. Select **Install**. The Open dialog box opens.
7. Browse to and select the saved module **.fpi** file.
8. Select **Install**. The Installation screen opens.
9. Select **I agree to the License Agreement** to confirm that you have read and agree to the terms of the License Agreement and select **Install**. The installation cannot proceed unless you agree to the license agreement.

   - The installation begins immediately after selecting Install and cannot be interrupted or canceled.
   - In modules that contain more than one component, the installation proceeds automatically one component at a time.

10. When the installation completes, select **Close** to close the window. The installed module is displayed in the Modules pane.

   - Some components are not automatically started following installation.
   - This module interacts with Forescout App for IBM QRadar. If you install only this module, you can send Forescout platform information to IBM QRadar. However, you need to install and configure both components to work with all the features described in this document, including bidirectional interaction with IBM QRadar.

**Configure the Module**

Configure the module to ensure that the Forescout platform can communicate with IBM QRadar. Perform this procedure after Forescout eyeExtend for IBM QRadar is installed on your IBM QRadar SIEM server. To complete configuration of some of these connections, you need to perform the following configuration steps on the IBM QRadar server:

- Define Target IBM QRadar SIEM Servers
- Include Syslog Message Header
- Install the Forescout App for IBM QRadar into IBM QRadar
- Create a Service
- Insert the Authorized Service Token
- Send Data from the Forescout platform to IBM QRadar
- Verify Configurations
Define Target IBM QRadar SIEM Servers

For IBM QRadar reporting purposes, you need to map CounterACT Appliances to an IBM QRadar server. Each CounterACT device communicates with a single IBM QRadar server. If you define more than one IBM QRadar server, you can assign individual CounterACT Appliances to each IBM QRadar server.

**To add QRadar SIEM server targets for CounterACT devices:**

1. In the Console toolbar, select **Options**.
2. In the left pane, select the **Modules** folder.
3. In the Modules pane, select **QRadar SIEM Server** and then select **Configure**.
4. In the QRadar SIEM pane, select **Add**.

---

**Server Address**

Specify the server address of the QRadar SIEM server. If a single SIEM server is selected, then all other CounterACT devices proxy their endpoint updates through the selected Connecting Appliance. If multiple SIEM servers are specified, use the Assigned CounterACT Devices tab to assign each CounterACT device. The assigned CounterACT devices send their managed endpoints' updates to the SIEM server through the selected Connecting Appliance.

**Port**

Specify the port number of the QRadar SIEM server. The default port is 514.

**Server Protocol**

Specify UDP or TCP as your QRadar SIEM server protocol.

**Comment**

(Optional) Insert text, for example, the name of the QRadar SIEM server.

**Connecting Appliance**

Select the CounterACT Appliance to communicate between the IBM QRadar SIEM server and the assigned CounterACT devices.

5. Select **Next**.
6. Choose one of the following options:

   a. Select **Default Server** to make this server the target for *all* CounterACT devices not assigned to another IBM QRadar SIEM server. Until you define more than one server, this is the only option available.

   b. Select **Assign CounterACT devices** and then select one or more items in the device list. The selected devices send its managed endpoints’ update to the editing SIEM server through the Connecting Appliance.

Multiple CounterACT devices
c-connected to one QRadar
   SIEM server

7. Select **Finish**. The server is displayed in the QRadar SIEM pane.
8. (Optional) Repeat Steps 4 through 7 to add additional QRadar servers.

Multiple Devices

For IBM QRadar High Availability (HA) deployments, add each server IP by repeating the steps above for each QRadar appliance:

- Primary Appliance IP
- Secondary Appliance IP
- Virtual IP of the HA Cluster

Edit Server Target

If you need to reassign CounterACT devices to a different server, use the Edit option:

To edit a QRadar SIEM server target:
1. In the Modules pane, select the QRadar SIEM server. The QRadar SIEM pane opens.
2. Select the server then select Edit.
3. Make your edits and select OK.
Delete Server Targets

To delete a QRadar SIEM server target:

1. In the Modules pane, select the **QRadar SIEM server**. The QRadar SIEM pane opens.
2. Select the server and then select **Remove**.

Include Syslog Message Header

You can add a syslog header to all CEF messages delivered to the SIEM servers. This option may require additional configuration on the SIEM servers.

To include syslog message headers in CEF messages:

1. Select **Options**.
2. Select **Use Syslog transport for message delivery** and define the following fields:

<table>
<thead>
<tr>
<th><strong>Identity</strong></th>
<th>A string to identify the source of the syslog message (default: Forescout)</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Facility</strong></td>
<td>Syslog message facility (default: local1)</td>
</tr>
<tr>
<td><strong>Priority</strong></td>
<td>Syslog message priority (default: info)</td>
</tr>
</tbody>
</table>

Install the Forescout App for IBM QRadar into IBM QRadar

For greater functionality, the Forescout App for IBM QRadar needs to be installed.

**To install the Forescout App for IBM QRadar:**

1. Go to https://exchange.xforce.ibmcloud.com/hub
2. Find the Forescout square and select it to download the zip file attachment to the local drive.
3. In IBM QRadar, select the Admin tab and then select **Extension Management**.
4. Select **Add**.
5. Browse to the zip file and select it.
6. You have the option to select **Install immediately** or you can install according to your company’s change policy.

7. The Forescout Integration for IBM QRadar dialog box opens.

8. Accept the default settings and then select **Install**. Select **OK** when finished.

9. In the Admin tab, the newly installed module is displayed as **Installed**.

10. IBM QRadar automatically runs a check for any changes.

11. If there are changes that need to be made, select **Deploy Change**.

12. Confirm the installation by refreshing the page and scrolling down. The Forescout icon is displayed.
Create a Service

This section addresses how to create a Service for the newly-installed Forescout eyeExtend for IBM QRadar.

1. In QRadar, select **Authorized Services** in the Admin tab. The Authorized Services dialog box opens.

2. Select **Add Authorized Services**. The Add Authorized Service dialog box opens.

3. Enter information into the **Service Name**, **User Role**, and **Security Profile** fields.

4. It is recommended that the **No Expiry** field is checked.

5. Select **Create Service**. The new service is displayed in the Authorized Services list the information, including the Authorization Token.

6. **Close** the Authorized Services dialog box. QRadar automatically checks for un-deployed changes.

7. As you just added a Service, there can be un-deployed changes. Select **Deploy Changes**. (Note: It is required do this before proceeding.)

Insert the Authorized Service Token

1. You need the token for the service you just created. In the Admin tab, User Management section and then select **Authorized Services**.

2. Select the newly-created service and copy the Authentication Token.

3. Close the Authorized Services dialog box.
4. In the Admin tab, scroll down to and select the Forescout icon. The Authorized Service Token dialog box opens.

5. Paste the Authentication Token into the field and then select **Save**.

6. You need to communicate the new Authorized Service with the Forescout platform. In the CounterACT section, select **Add**.

7. Enter the IP address of the Connected CounterACT device, protocol, default syslog port number and any comments and then select **Save**. QRadar checks for changes that need to be deployed.

   - *Make sure this CounterACT device is set as the connecting device in the configuration and that the protocol setting is the same.*

8. Verify the Authorized Token(s) were saved by returning to the Admin tab and selecting the Forescout icon.

---

### Send Data from the Forescout platform to IBM QRadar

The Forescout platform can send policy and host information to IBM QRadar based on set Forescout platform policy conditions, or on a regular schedule.

Forescout platform policies use a wide range of host conditions to trigger various management and remediation actions. When the conditions of the policy are met, the actions are implemented. With Forescout eyeExtend for IBM QRadar, platform policies can include notification messages to IBM QRadar SIEM servers as an action.

To implement IBM QRadar reporting, define a Forescout platform policy that includes the IBM QRadar update action. When the conditions of this policy are met, IBM QRadar notification is implemented in one of several modes:

- **One-time report** - current policy/host information is sent once when the conditions of the policy are met.

- **Update reporting** - a message is sent whenever the host information or policy status changes.

- **Periodic reporting** - a message is sent at regularly defined intervals.

   - *The policy conditions needs to be met at least once to initiate update reporting or periodic reporting. Similarly, the Forescout platform stops change reporting and periodic reporting when the conditions of the policy are no longer met.*

You can further modify notification behavior using standard action scheduling options.

**To create an IBM QRadar reporting action in a Forescout platform policy:**

1. In the Console, go to the Actions pane, select **Audit**, and then select **Send Updates to QRadar SIEM Server**. The Content tab opens in the right pane. Use this tab to determine the information that is reported to IBM QRadar for hosts in the scope of the policy.
2. To send host property values to the QRadar server, select **Send host property results**.

   - When new host properties are added to Forescout plugins, eyeExtend products, or future release of the core Forescout software; it might be necessary use the QRadar DSM Editor to solve parsing problems and add your own custom parsing. You use the DSM Editor to extract fields, define custom properties, categorize events, and define new QID definition. For example: When Forescout releases a new eyeExtend product, Forescout may also introduce new host properties within that module. To utilize these new properties in the QRadar offense rules, building blocks, or widgets – users need to parse the new host property from the **Send SIEM Updates** event. Refer to processing event data in QRadar for more information on QRadar event processing and creating custom DSMs: [https://www.ibm.com/support/knowledgecenter/en/SS42VS_7.2.8/com.ibm.qradar.doc/c_qradar_admin_data_ingestion.html](https://www.ibm.com/support/knowledgecenter/en/SS42VS_7.2.8/com.ibm.qradar.doc/c_qradar_admin_data_ingestion.html)

3. Choose an option:
   - Select **Send all** to include all properties discovered.
   - Select **Send specific** to send the values of specific properties. Choose the properties to report from the list.

4. Select **Send policy status** to send the Forescout platform policy status (Match/Unmatch/Pending/Irresolvable).

   Select the Trigger tab. Use this tab to determine reporting behavior.

5. In the Action dialog box, choose an option(s):
   - Select **Send when the action starts** to send information once when the conditions of the policy are met.
   - Select **Send when information is updated** to send information when there is a change in the host properties you specified in the Content tab.
– Select **Send periodically every** to send information at fixed intervals.

6. Select the Schedule tab. You can use these standard action scheduling options to further customize message delivery. For example, you can choose the **Customize action start time** option to delay message delivery, or to limit the duration of repeated or regularly scheduled messages.

7. Select **OK**.

### Verify Configurations

1. In the Console, select **Asset Inventory**. The Views pane opens.

2. In the Views pane, select the **IBM QRadar icon** to expand it and then select any of the items in the list to view its properties.

<table>
<thead>
<tr>
<th>QRadar Last Offense</th>
<th>QRadar Last Offense lists the most recent offense that needs addressing by the QRadar user. The offense shows up in both QRadar Last Offense and QRadar Offenses. The last offense does not change until a new offense comes in or the Forescout platform purges it after a specific time.</th>
</tr>
</thead>
<tbody>
<tr>
<td>QRadar Last Policy Trigger</td>
<td>“Policy Trigger” in the Console is the same as “Disposition” in the QRadar console. Each time a disposition is selected from a QRadar user, the selected disposition triggers a policy event.</td>
</tr>
<tr>
<td>QRadar Offenses</td>
<td>QRadar Offenses lists all remediated offenses.</td>
</tr>
<tr>
<td>QRadar Policy Triggers</td>
<td>QRadar Policy Triggers lists all remediated policies / dispositions.</td>
</tr>
</tbody>
</table>

3. Check that the properties match the configuration requirements.

The configuration of IBM QRadar is now complete. To use the IBM QRadar application, refer to **QRadar Documentation**. To use Forescout eyeExtend for IBM QRadar, refer to the **Forescout App for IBM QRadar How-To-Guide**.

### Run IBM QRadar Policy Templates

Forescout platform templates help you quickly create important, widely-used policies that easily control endpoints and can guide users to compliance. These policies can be viewed in the Policy Manager.

Forescout platform policies use a wide range of host conditions to trigger various management and remediation actions. When the conditions of the policy are met, the actions are implemented. With Forescout eyeExtend for IBM QRadar, Forescout platform policies can include notification messages to IBM QRadar SIEM servers as an action.

Predefined actions – instructions regarding how to handle endpoints – are generally disabled by default when working with templates. You should only enable actions after testing and fine-tuning the policy.

The following default policy templates are available within Forescout eyeExtend for IBM QRadar:
- **Action on Disposition**
- **Action on Offense by Credibility and Severity**
- **Action on Offense by Description**
- **Send SIEM Updates**
- **WinCollect Agent Compliance**

Action on Disposition Policy Template

Use the IBM QRadar Action on Disposition policy template to apply actions to an endpoint for which the Forescout platform received a disposition event message from IBM QRadar. Sub-rules of the policy apply specific actions depending upon the disposition of the most recent IBM QRadar event received for the endpoint.

The sub-rules indicate that an IBM QRadar operator or administrator has requested the following actions be taken on an endpoint identified by the disposition.

To use the IBM QRadar Action on Disposition policy template:

1. Log in to the Console and select **Policy**.
2. Select **Add** from the Policy Manager. The Policy Wizard opens.
3. Expand the IBM QRadar folder and select **IBM QRadar Action on Disposition**. The **IBM QRadar Action on Disposition** pane opens.
4. Select **Next**.
Name the Policy

The Name pane lets you define a unique policy name and useful policy description. Policy names is displayed in the Policy Manager, the Views pane, NAC Reports and in other features. Precise names make working with policies and reports more efficient.

5. Define a unique name for the policy you are creating based on this template, and enter a description.
   - Make sure names are accurate and clearly reflect what the policy does. For example, do not use a generic name such as My_Compliance_Policy.
   - Use a descriptive name that indicates what your policy is verifying and which actions are taken.
   - Ensure that the name indicates whether the policy criteria is to be met or not.
   - Avoid having another policy with a similar name.

6. Select Next. Both the Scope pane and the IP Address Range dialog box open.

Define which Endpoints are Inspected - Policy Scope

7. Use the IP Address Range dialog box to define which endpoints are inspected.

The following options are available:
   - **All IPs**: Include all IP addresses in the Internal Network.
− **Segment**: Select a previously defined segment of the network. To specify multiple segments, select **OK** or **Cancel** to close this dialog box, and select **Segments** from the Scope pane.

− **Unknown IP addresses**: Apply the policy to endpoints whose IP addresses are not known. Endpoint detection is based on the endpoint MAC address.

8. Select **OK**. The added range is displayed in the Scope pane.

9. Select **Next**. The Main Rule pane opens. See [How Endpoints are Detected and Handled](#) for details of default policy logic.

**How Endpoints are Detected and Handled**

This section describes the main rule and sub-rules of the policy created by this template. Policy rules instruct the Forescout platform how to detect and handle endpoints defined in the policy scope.

Endpoints that match the Main Rule are included in the policy inspection. **Endpoints that do not match this rule are not inspected for this policy**. Sub-rules automatically follow up with endpoints after initial detection and handling, streamlining separate detection and actions into one automated sequence.

Sub-rules are performed in order until a match is found. When a match is found, the corresponding action is applied to the endpoint. If the endpoint does not match the requirements of the sub-rule, it is inspected by the next rule.

**Main Rule**

The main rule of this policy detects the last disposition sent from IBM QRadar Action to the Forescout platform.
10. The Condition Criteria section is populated by default.
11. Select **Next**.
Sub-Rules

The sub-rules of the IBM QRadar Action on Disposition policy detect threats based on their reported severity.

The Sub Rules pane lists all the Sub-Rules associated with the IBM QRadar Action on Disposition policy. Below is a list of all the icons used in the Actions column. These are used for threats with Critical and High severity:

- An optional Send Updates to QRadar SIEM Server action is enabled for each sub-rule.

- Refer to the Forescout Administration Guide to understand the symbols listed in the Actions column.

12. Select Finish

13. In the Policy Manager, select Apply to save the policy. The Policy Manager refreshes with the IBM QRadar Action on Disposition rule and all the sub-rules.

14. Select Start to execute the policy.

For information on how to use the IBM QRadar Action on Disposition feature, refer to the Forescout App for IBM QRadar How-to-Guide.
**Action on Offense by Credibility and Severity Policy Template**

Use the IBM QRadar Action on Offense by Credibility and Severity policy template to apply action to an endpoint for which the Forescout platform received an offense alert from QRadar. Sub-rules of the policy apply specific action depending upon the severity and credibility of the offense event.

**To use the IBM QRadar Action on Offense by Credibility and Severity policy template:**

1. Log in to the Console and select **Policy**.
2. Select **Add** from the Policy Manager. The Policy Wizard opens.
3. Expand the IBM QRadar folder and select **IBM QRadar Action on Offense by Credibility and Severity**. The IBM QRadar Action on Offense by Credibility and Severity pane opens.
4. Select **Next**.

**Name the Policy**

The Name pane lets you define a unique policy name and useful policy description. Policy names are displayed in the Policy Manager, the Views pane, NAC Reports and in other features. Precise names make working with policies and reports more efficient.

5. Define a unique name for the policy you are creating based on this template, and enter a description.
   - Make sure names are accurate and clearly reflect what the policy does. For example, do not use a generic name such as My_Compliance_Policy.
   - Use a descriptive name that indicates what your policy is verifying and which actions are taken.
   - Ensure that the name indicates whether the policy criteria needs to be met or not.
   - Avoid having another policy with a similar name.
6. Select **Next**. Both the Scope pane and the IP Address Range dialog box open.

**Define Which Endpoints Are Inspected - Policy Scope**

7. Use the IP Address Range dialog box to define which endpoints are inspected.

![IP Address Range Dialog Box]

The following options are available:

- **All IPs**: Include all IP addresses in the Internal Network.
- **Segment**: Select a previously defined segment of the network. To specify multiple segments, select **OK** or **Cancel** to close this dialog box, and select **Segments** from the Scope pane.
- **Unknown IP addresses**: Apply the policy to endpoints whose IP addresses are not known. Endpoint detection is based on the endpoint MAC address.

8. Select **OK**. The added range is displayed in the Scope pane.

9. Select **Next**. The Main Rule pane opens. See **How Endpoints Are Detected and Handled** for details of default policy logic.

**How Endpoints Are Detected and Handled**

This section describes the main rule and sub-rules of the policy created by this template. Policy rules instruct the Forescout platform how to detect and handle endpoints defined in the policy scope.

Endpoints that match the Main Rule are included in the policy inspection. **Endpoints that do not match this rule are not inspected for this policy.** Sub-rules automatically follow up with endpoints after initial detection and handling, streamlining separate detection and actions into one automated sequence.

Sub-rules are performed in order until a match is found. When a match is found, the corresponding action is applied to the endpoint. If the endpoint does not match the requirements of the sub-rule, it is inspected by the next rule.

**Main Rule**

The main rule of this policy applies no filtering conditions: it includes all endpoints detected by the Forescout platform within the specified policy scope.
10. The Condition Criteria section is populated by default.

11. Select Next.

**Sub-Rules**

Sub-rules include default action to be taken on:

- **High Credibility and (High) Severity events** – By default the sub-rule for last offense credibility is set to 8, 9, and 10.
- **Medium Credibility and (Medium) Severity events** - By default the sub-rule for last offense credibility is set to 4, 5, 6, and 7.
- **Low Credibility and (Low) Severity events** - By default the sub-rule for last offense credibility is set to 1, 2, and 3.
The Sub Rules pane lists all the Sub-Rules associated with the IBM QRadar Action on Offenses by Credibility and Severity policy. Below is a list of all the icons used in the Actions column. These are used for threats with Critical and High severity:

- An optional **Send Updates to QRadar SIEM Server** action is enabled for each sub-rule.

  - Refer to the Forescout Administration Guide to understand the symbols listed in the Actions column.

12. Select **Finish**.

13. In the Policy Manager, select **Apply** to save the policy. The Policy Manager refreshes with the IBM QRadar Action on Offenses by Credibility and Severity rule and all the sub-rules.

14. Select **Start** to execute the policy.

15. On the Policy Manager, select **Apply** to save the policy.

For information on how to use the IBM QRadar Action on Offense by Credibility and Severity feature, refer to the *Forescout App for IBM QRadar How-to-Guide*.
Action on Offense by Description Policy Template

Use the IBM QRadar Action on Offense by Description policy template to apply action to an endpoint for which the Forescout platform received an offense alert from IBM QRadar. Sub-rules of the policy apply specific action depending upon the description of the offense alert.

To use the IBM QRadar Action on Offense by Description policy template:

1. Log in to the Console and select Policy.
2. Select Add from the Policy Manager. The Policy Wizard opens.
3. Expand the IBM QRadar folder and select IBM QRadar Action on Offense by Description. The IBM QRadar Action on Offense by Description pane opens.
4. Select Next.

Name the Policy

The Name pane lets you define a unique policy name and useful policy description. Policy names are displayed in the Policy Manager, the Views pane, NAC Reports and in other features. Precise names make working with policies and reports more efficient.

5. Define a unique name for the policy you are creating based on this template, and enter a description.
   - Make sure names are accurate and clearly reflect what the policy does. For example, do not use a generic name such as My_Compliance_Policy.
   - Use a descriptive name that indicates what your policy is verifying, and which actions are taken.
   - Ensure that the name indicates whether the policy criteria needs to be met or not.
   - Avoid having another policy with a similar name.
6. Select Next. Both the Scope pane and the IP Address Range dialog box open.
Define Which Endpoints Are Inspected - Policy Scope

7. Use the IP Address Range dialog box to define which endpoints are inspected.

The following options are available:

- **All IPs**: Include all IP addresses in the Internal Network.
- **Segment**: Select a previously defined segment of the network. To specify multiple segments, select **OK** or **Cancel** to close this dialog box, and select **Segments** from the Scope pane.
- **Unknown IP addresses**: Apply the policy to endpoints whose IP addresses are not known. Endpoint detection is based on the endpoint MAC address.

8. Select **OK**. The added range is displayed in the Scope pane.

9. Select **Next**. The Main Rule pane opens.

**How Endpoints Are Detected and Handled**

This section describes the main rule and sub-rules of the policy created by this template. Policy rules instruct the Forescout platform how to detect and handle endpoints defined in the policy scope.

Endpoints that match the Main Rule are included in the policy inspection. *Endpoints that do not match this rule are not inspected for this policy*. Sub-rules automatically follow up with endpoints after initial detection and handling, streamlining separate detection and actions into one automated sequence.

Sub-rules are performed in order until a match is found. When a match is found, the corresponding action is applied to the endpoint. If the endpoint does not match the requirements of the sub-rule, it is inspected by the next rule.

**Main Rule**

The main rule of this policy detects all Offenses detected by IBM QRadar Action by Offense by Description reported to the Forescout platform in the last week.
10. The Condition Criteria section is populated by default.

11. Select **Next**. The Sub-Rules pane opens.

**Sub-Rules**

The Sub Rules pane lists all the Sub-Rules associated with the IBM QRadar Action on Offense by Description policy. Sub-rules include default action to be taken on:

- Quarantine endpoints that access honeypots
- Quarantine endpoints that are subject to an attack and then respond to malicious activity
- Notify users when their endpoint has stopped sending events to IBM QRadar
- Quarantine endpoints with excessive firewall denies
- Quarantine endpoints that are executing a TCP flood attack
- Quarantine endpoints that are actively scanning for SSH servers
- Notify the Forescout platform when a new endpoint is discovered by IBM QRadar

Below is a list of all the icons used in the Actions column. These are used for threats with **Critical** and **High** severity:

1. An optional **Send Updates to QRadar SIEM Server** action is enabled for each sub-rule.
2. Refer to the Forescout Administration Guide to understand the symbols listed in the Actions column.
12. Select Finish.
13. In the Policy Manager, select Apply to save the policy. The Policy Manager refreshes with the IBM QRadar Action on Disposition rule and all the sub-rules.
14. Select Start to execute the policy.

For information on how to use the IBM QRadar Action on Offense by Description feature, refer to the Forescout App for IBM QRadar How-to Guide.

Send SIEM Updates Policy Template

Use the IBM QRadar Send SIEM Update policy template to periodically send host information to IBM QRadar. By default, this policy sends all property and policy information, for all endpoints, using all syslog as a communication method configured for IBM QRadar interaction. The default is an update every hour.

To use the IBM QRadar Send SIEM Updates policy template:
1. Log in to the Console and select Policy.
2. Select Add from the Policy Manager. The Policy Wizard opens.
3. Expand the IBM QRadar folder and select IBM QRadar Send SIEM Updates. The IBM QRadar Send SIEM Updates pane opens.
4. Select Next.

Name the Policy

The Name pane lets you define a unique policy name and useful policy description. Policy names are displayed in the Policy Manager, the Views pane, NAC Reports and in other features. Precise names make working with policies and reports more efficient.

5. Define a unique name for the policy you are creating based on this template, and enter a description.
− Make sure names are accurate and clearly reflect what the policy does. For example, do not use a generic name such as My_Compliance_Policy.
− Use a descriptive name that indicates what your policy is verifying, and which actions are taken.
− Ensure that the name indicates whether the policy criteria needs to be met or not.
− Avoid having another policy with a similar name.

6. Select **Next**. Both the Scope pane and the IP Address Range dialog box open.

**Define Which Endpoints Are Inspected - Policy Scope**

7. Use the IP Address Range dialog box to define which endpoints are inspected.

![IP Address Range](image)

The following options are available:

− **All IPs**: Include all IP addresses in the Internal Network.
− **Segment**: Select a previously defined segment of the network. To specify multiple segments, select **OK** or **Cancel** to close this dialog box, and select **Segments** from the Scope pane.
− **Unknown IP addresses**: Apply the policy to endpoints whose IP addresses are not known. Endpoint detection is based on the endpoint MAC address.

8. Select **OK**. The added range is displayed in the Scope pane.

9. Select **Next**. The Main Rule pane opens. See **How Endpoints Are Detected and Handled** for details of default policy logic.

**How Endpoints Are Detected and Handled**

This section describes the main rule and sub-rules of the policy created by this template. Policy rules instruct the Forescout platform how to detect and handle endpoints defined in the policy scope.

Endpoints that match the Main Rule are included in the policy inspection. *Endpoints that do not match this rule are not inspected for this policy*. Sub-rules automatically follow up with endpoints after initial detection and handling, streamlining separate detection and actions into one automated sequence.

Sub-rules are performed in order until a match is found. When a match is found, the corresponding action is applied to the endpoint. If the endpoint does not match the requirements of the sub-rule, it is inspected by the next rule.
Main Rule

For the main rule pane, only an Action item is configured for the IBM QRadar Send SIEM Update policy.

10. Select Next. The Sub-Rules pane opens.

Sub-Rules

There are no default sub-rules.

11. Select Finish.

12. Select Start to execute the policy.

13. On the Policy Manager, select Apply to save the policy.

WinCollect Agent Compliance Policy Template

WinCollect is used to monitor Windows event logs (both local and remote) and transmits them to a remote console via syslog.

Before you create this policy, you need to install the WinCollect Agent on your server.

1. Go to Computer and then select Manage. The Computer Management dialog box opens.
2. Expand **Services and Applications** and then select **Services**.

3. Select **WinCollect** and the WinCollect Properties dialog box opens.

4. The path to executable should be `\Program Files\IBM\WinCollect\bin\WinCollectSvc.exe`.

Use the IBM QRadar WinCollect Agent Compliance template to create a Forescout platform policy that:

- Detects endpoints on which the IBM QRadar WinCollect agent is installed and running.
- Detects endpoints on which that IBM QRadar WinCollect agent is not installed.
- Detects endpoints on which that IBM QRadar WinCollect agent is irresolvable.

In addition, optional actions can be used to:

- Direct users to a URL from which to install the agent if it is not installed. It is recommended that the URL be available from outside the network.
- Run a script to start the IBM QRadar WinCollect agent if it is installed but not running.

**To use the IBM QRadar WinCollect Agent Compliance policy template:**

1. Log in to the Console and select **Policy**.
2. Select **Add** from the Policy Manager. The Policy Wizard opens.
3. Expand the **IBM QRadar** folder and then select **IBM QRadar WinCollect Agent Compliance**. The **IBM QRadar WinCollect Agent Compliance** pane opens.

4. Select **Next**.

**Name the Policy**

The Name pane lets you define a unique policy name and useful policy description. Policy names are displayed in the Policy Manager, the Views pane, NAC Reports and in other features. Precise names make working with policies and reports more efficient.

5. Define a unique name for the policy you are creating based on this template, and enter a description.
   - Make sure names are accurate and clearly reflect what the policy does. For example, do not use a generic name such as My_Compliance_Policy.
   - Use a descriptive name that indicates what your policy is verifying and which actions are taken.
   - Ensure that the name indicates whether the policy criteria needs to be met or not.
   - Avoid having another policy with a similar name.

6. Select **Next**. Both the Scope pane and the IP Address Range dialog box open.

**Define Which Endpoints Are Inspected - Policy Scope**

7. Use the IP Address Range dialog box to define which endpoints are inspected.
The following options are available:

- **All IPs**: Include all IP addresses in the Internal Network.
- **Segment**: Select a previously defined segment of the network. To specify multiple segments, select **OK** or **Cancel** to close this dialog box, and select **Segments** from the Scope pane.
- **Unknown IP addresses**: Apply the policy to endpoints whose IP addresses are not known. Endpoint detection is based on the endpoint MAC address.

  **8.** Select **OK**. The added range is displayed in the Scope pane.
  **9.** Select **Next**. The Main Rule pane opens.

**How Endpoints Are Detected and Handled**

This section describes the main rule and sub-rules of the policy created by this template. Policy rules instruct the Forescout platform how to detect and handle endpoints defined in the policy scope.

Endpoints that match the Main Rule are included in the policy inspection. *Endpoints that do not match this rule are not inspected for this policy*. Sub-rules automatically follow up with endpoints after initial detection and handling, streamlining separate detection and actions into one automated sequence.

Sub-rules are performed in order until a match is found. When a match is found, the corresponding action is applied to the endpoint. If the endpoint does not match the requirements of the sub-rule, it is inspected by the next rule.

**Main Rule**

The main rule of this policy detects all Windows devices detected by the Forescout platform to identify them as in scope for the IBM QRadar WinCollect Agent Compliance policy.
10. The Condition Criteria section is populated by default.
11. Select Next.
Sub-Rules include default action to be taken on:

- IBM QRadar WinCollect Installed & Running
- IBM QRadar WinCollect Installed but NOT Running
- IBM QRadar WinCollect NOT Installed
- IBM QRadar WinCollect Irresolvable

Refer to the Forescout Administration Guide to understand the symbols listed in the Actions column.

12. Select Finish.
13. In the Policy Manager, select Apply to save the policy. The Policy Manager refreshes with the IBM QRadar Action on Disposition rule and all the sub-rules.
14. Select Start to execute the policy.

Create Custom IBM QRadar Policies

Forescout platform policies are powerful tools used for automated endpoint access control and management.
Policies and Rules, Conditions and Actions

Forescout platform policies contain a series of rules. Each rule includes:

- Conditions based on host property values. The Forescout platform detects endpoints with property values that match the conditions of the rule. Several conditions based on different properties can be combined using Boolean logic.
- Actions can be applied to endpoints that match the conditions of the rule.

In addition to the bundled Forescout platform properties and actions available for detecting and handling endpoints, you can use properties to create custom policies.

To create a custom policy:

1. In the Console, select Policy. The Policy Manager opens.
2. Select Add to create a policy, or select Help for more information about working with policies.

Policy Properties

This section describes the properties that are available when you install Forescout eyeExtend for IBM QRadar.
To access QRadar properties:

1. Go to the Properties tree from the Policy Conditions dialog box.
2. Expand the IBM QRadar folder in the Properties tree.

The following properties are available.

<table>
<thead>
<tr>
<th>Property</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>QRadar Last Offense</td>
<td>Information received from QRadar about an endpoint's most recent offense.</td>
</tr>
<tr>
<td>QRadar Last Policy Trigger</td>
<td>Information received from QRadar about an endpoint's most recent disposition.</td>
</tr>
<tr>
<td>QRadar Offenses</td>
<td>Lists the information about offenses received by QRadar.</td>
</tr>
<tr>
<td>QRadar Policy Triggers</td>
<td>Lists the information about dispositions received by QRadar.</td>
</tr>
</tbody>
</table>

**Policy Actions**

Forescout platform policy actions let you instruct the Forescout platform how to control detected endpoints. For example, assign an endpoint infected with a virus to an isolated VLAN or send the device user or IT team an email.

In addition to the bundled Forescout platform properties and actions available for detecting and handling endpoints, you can work with QRadar-related properties and actions to create the custom policies. These items are available when you install the module.

To access Forescout platform actions:

1. In the Console, go to the Action tree from the Policy Conditions dialog box.
2. Expand the **Audit** folder in the Actions tree.
The following actions are available.

<table>
<thead>
<tr>
<th>Action</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Send Updates to QRadar SIEM Server</strong></td>
<td>Sends the policy status and host information from the Forescout platform to the QRadar SIEM Server.</td>
</tr>
</tbody>
</table>

**Send Data from the Forescout platform to IBM QRadar**

To implement IBM QRadar reporting, define a Forescout platform policy that includes the IBM QRadar update action. When the conditions of this policy are met, IBM QRadar notification is implemented in one of several modes:

- **One-time report**: current policy/host information is sent once when the conditions of the policy are met.
- **Update reporting**: a message is sent whenever the host information or policy status changes.
- **Periodic reporting**: a message is sent at regularly defined intervals.

The policy conditions needs to be met at least once to initiate update reporting or periodic reporting. Similarly, the Forescout platform stops change reporting and periodic reporting when the conditions of the policy are no longer met.

You can further modify notification behavior using standard action scheduling options.
To create an IBM QRadar reporting action in a Forescout platform policy:

1. Create or edit a policy, and edit policy actions.

2. In the Actions tree, select **Audit** and then select **Send Updates to QRadar SIEM Server**. The Content tab opens. Use this tab to determine the information that is reported to IBM QRadar for hosts in the scope of the policy.

3. Select the **Send host property results** option to send host property values to the IBM QRadar server.
   - Select **Send all** to include all properties discovered.
   - Select **Send specific** to send the values of specific properties. Choose the properties to report from the list.

4. Select **Send policy status** to send the Forescout platform policy status (Match/Unmatch/Pending/Irresolvable).

5. Select the Trigger tab. Use this tab to determine reporting behavior.

6. Select the following options:
   - Select **Send when the action starts** to send information once when the conditions of the policy are met.
   - Select **Send when information is updated** to send information when there is a change in the host properties you specified in the Content tab.
   - Select **Send periodically every** to send information at fixed intervals.

7. Select the Schedule tab. You can use these standard action scheduling options to further customize message delivery. For example, you can choose the **Customize action start time** option to delay message delivery, or to limit the duration of repeated or regularly scheduled messages.

**Use Forescout eyeExtend for QRadar**

See also [Send Data from the Forescout platform to IBM QRadar](#). 

---

**Version 2.1.2**

46
For more information on how to use this module, refer to the Forescout App for IBM QRadar How-To-Guide.

## Integrate the Forescout Functionalities into IBM QRadar

Now that you have established communication between Forescout eyeExtend for IBM QRadar and the IBM QRadar SIEM server, you can work with Forescout functionalities in the IBM QRadar Dashboard.

There are five dashboard widgets that can be imported.

1. In the Dashboard tab, make sure the Show Dashboard field displays **System Monitoring**.
2. Select the Add Item drop-down, select **Forescout** and then select the widget.

<table>
<thead>
<tr>
<th>Compliance Status Summary</th>
<th>The number of endpoints that have or have not fulfilled organizational requirements for compliance policies. For example, the number of endpoints that have or have not installed prohibited applications such as instant messaging or peer-to-peer applications.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Device Classification</td>
<td>Indicates the percentage of all the different types of devices that are connected to the network. Example: Windows, Mac, Android, Unknown.</td>
</tr>
<tr>
<td>Host Connection Status</td>
<td>The number of endpoints that are currently connected to your network.</td>
</tr>
<tr>
<td>Corporate/Guest Status</td>
<td>The number of endpoints in your organization not considered part of the corporate network, for example, personal laptops used by outside contractors. The Forescout platform may have detected these endpoints when they did not properly authenticate with the network.</td>
</tr>
</tbody>
</table>
| CounterACT Dashboard       | You can have multiple CounterACT Dashboards.  
1. Select the IP address in the Forescout CounterACT field and then select Open. The CounterACT login opens.  
2. Log in. The CounterACT Dashboard opens. The widget is displayed on the Dashboard as a pie chart. |

![Dashboard Screenshot](image-url)
View Widget Details

Each widget watches IP addresses related to their subject matter. You can drill-down into each widget to get detailed information:

1. Within a widget, select the View Detail link. The Details page opens.
2. In the Time Range field, select the time slot for which you want to view more details then select Update. The information is displayed as a pie chart.

Customize the Display of the Dashboard

You can re-order the widgets on the Dashboard using the drag-and-drop method. Simply drag the grey bar of the widget frame to the desired location.
Display Inventory Data

Use the Asset Inventory to view a real-time display of threats detected by IBM QRadar. The Asset Inventory lets you:

- Broaden your view of the organizational network from device-specific to activity-specific.
- View endpoint information reported by the IBM QRadar Offences and Disposition Triggers.
- View endpoints that have been detected with specific Offences.
- Easily track IBM QRadar Offence detection activity.
- Incorporate inventory detections into policies.

To access the Access Inventory:

1. In the Console, select **Asset Inventory** from the toolbar.
2. Go to the **IBM QRadar** folder. The list of QRadar offenses is displayed.

Additional Forescout Documentation

For information about other Forescout features and modules, refer to the following resources:

- [Documentation Downloads](#)
- [Documentation Portal](#)
- [Forescout Help Tools](#)
Documentation Downloads

Documentation downloads can be accessed from the Forescout Resources Page, and one of two Forescout portals, depending on which licensing mode your deployment is using.

- **Per-Appliance Licensing Mode** – Product Updates Portal
- **Flexx Licensing Mode** – Customer Portal

Software downloads are also available from these portals.

To identify your licensing mode:
- From the Console, select Help > About Forescout.

Forescout Resources Page

The Forescout Resources page provides links to the full range of technical documentation.

To access the Forescout Resources page:

Product Updates Portal

The Product Updates Portal provides links to Forescout version releases, Base and Content Modules, and eyeExtend products, as well as related documentation. The portal also provides a variety of additional documentation.

To access the Product Updates Portal:
- Go to https://updates.forescout.com/support/index.php?url=counteract and select the version you want to discover.

Customer Portal

The Downloads page on the Forescout Customer Portal provides links to purchased Forescout version releases, Base and Content Modules, and eyeExtend products, as well as related documentation. Software and related documentation only appear on the Downloads page if you have a license entitlement for the software.

To access documentation on the Forescout Customer Portal:
- Go to https://Forescout.force.com/support/ and select Downloads.

Documentation Portal

The Forescout Documentation Portal is a searchable, web-based library containing information about Forescout tools, features, functionality, and integrations.

To access the Documentation Portal:
- Go to https://updates.forescout.com/support/files/counteract/docs_portal/
Forescout Help Tools
Access information directly from the Console.

Console Help Buttons
Use context-sensitive Help buttons to access information about tasks and topics quickly.

Forescout Administration Guide
 Select Forescout Help from the Help menu.

Plugin Help Files
 After installing the plugin, select Tools > Options > Modules, select the plugin, and then select Help.

Online Documentation
 Select Online Documentation from the Help menu to access either the Forescout Resources Page (Flexx licensing) or the Documentation Portal (Per-Appliance licensing).
