In the era of IT/OT Convergence, Industry 4.0 and Industrial Internet of Things (IIoT), Industrial Control System (ICS) Networks Have a Unique Set of Challenges.

Forescout's SilentDefense™ for ICS networks provides:
- Automatic and passive network security monitoring
- Real-time asset inventory
- Threat hunting capabilities
- Improved incident response
- Simplified standards and regulatory compliance

Forescout's customers benefit from:
- Reduced labor costs
- Increased OT management productivity
- Continuous improvements and updates of SilentDefense to satisfy business and regulatory requirements
- A comprehensive protection program that can provide actionable threat management updates on the fly

Forescout partners with industry leaders to offer built-in integration capabilities with:
- Several major ICS vendors
- All major security information and event management (SIEM) solutions
- A vast range of asset management solutions
- Almost all firewall applications available on the market

Establish visibility into assets, network architecture, risks and vulnerabilities

Detect and respond to evolving cyber security threats

Support internal and regulatory compliance efforts

Reduce operational downtime

Mitigate security, financial and reputation risk

1. Cyber Resilience Through Visibility, Detection and Control
2. Smarter Security Monitoring
3. Customer Value Oriented Process
4. Extensive Partnership Network
