About the Hybrid Cloud Module

The ForeScout CounterACT® Hybrid Cloud Module provides See, Control and Orchestrate functions across physical and virtual devices that are on-premises and off-premises through the following plugin integrations:

- AWS Plugin
- VMware NSX Plugin
- VMware vSphere Plugin

The Hybrid Cloud Module currently includes the three plugins listed above and is a ForeScout Base Module. Base Modules are delivered with each CounterACT release.

Refer to the relevant configuration guides for detailed information about how to work with and configure plugins included with this module. See Additional CounterACT Documentation for information about how to access these guides, and other documentation.

Module Requirements

This module requires CounterACT version 8.0.1 or above.

Components described in this document may have additional requirements and dependencies.

Install the Module

This module is available for version 8.0.1 or above via check for updates. New module releases may become available between CounterACT releases.

Rollback and Upgrade the Module

Plugins included in this module are installed and rolled back with the module.

If you are using any version of this module that is earlier than 1.2.0, you cannot rollback the module. Information regarding module upgrade and rollback will be available with the next module release.
About This Release

This section describes updates related to components delivered in this version of the Hybrid Cloud Module.

- **AWS Plugin**
- **VMware NSX Plugin**
- **VMware vSphere Plugin**

To learn about requirement information for components not updated in this release, refer to the relevant component Configuration Guide.

This release also includes enhancements and fixes provided in previous releases.

AWS Plugin

This section describes requirements and updates to AWS Plugin version 2.0.0.

Requirements

This plugin requires the following AWS components:

- An Amazon Web Services online account is required.
- You will need one AWS Access Key ID and Secret Key to configure the AWS plugin. These are associated with a User profile on AWS. The access key ID is a unique identifier associated with a secret key. These two keys are used by the AWS plugin to communicate with AWS on behalf of that user.
- If you are using a proxy server with Basic Authentication, you will need that proxy's credentials.
- The plugin requires the following AWS services:
  - **Amazon EC2** – Amazon Elastic Compute Cloud (Amazon EC2) is a web service that enables you to launch and manage Linux / UNIX and Windows server instances in Amazon’s public cloud.
  - **Amazon VPC** – Amazon Virtual Private Cloud (VPC) is a web service for provisioning a logically isolated section of AWS Cloud where you can launch AWS resources in a virtual network you define. You control your virtual networking environment, including selection of your own IP address range, creation of subnets, and configuration of route tables and network gateways.
  - **CloudWatch** - CloudWatch is a web service that enables you to monitor and manage various metrics. It also allows the configuration of alarm actions based on the metrics data.
There are two user permissions options that can be used on CounterACT:

- Read-only permissions (CounterACT will support visibility only)
- Full permissions (CounterACT will support both visibility and control)

**Networking Requirements**

The following must be configured on enterprise firewalls to support communication between CounterACT and AWS regional access points.

- Outgoing communication on port 443/TCP must be allowed
- The *.*.amazonaws.com domain must be reachable with HTTPS
- (Optional) Proxy communication, for example, port 8080 is open

**Fixed Issues**

AWS 2.0 is a re-architected plugin, so this section is not applicable for this release.

**Known Issues**

None.

**VMware NSX Plugin**

No updates were made to VMware NSX Plugin version 1.1.0.

**VMware vSphere Plugin**

This section describes requirements and updates to VMware vSphere Plugin version 2.2.0.

**Networking Requirements**

In case CounterACT and VMware vCenter server are not in the same location, the following ports must be open on enterprise firewalls to support communication between them.

- 443/TCP
**Supported Vendor Requirements**

- VMware vSphere® version 5.5, 6.0, 6.5, and 6.7

The following VMware licenses are required to work with the plugin.

- VMware vSphere® Enterprise Plus Edition™
- VMware vCenter® Server (standard)

**Fixed Issues**

This section describes fixed issues for this release.

<table>
<thead>
<tr>
<th>Defect #</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>VMW-422</td>
<td>The VMware endpoint's CPU and disk usage displayed as <em>Irresolvable</em>.</td>
</tr>
<tr>
<td>VMW-424</td>
<td>If a host profile was attached to a ESXi host, the ESXi Hosts Properties displayed as blank.</td>
</tr>
<tr>
<td>VMW-428</td>
<td>The vSphere plugin gets restarted upon SOAP handshake failure. On the vSphere plugin configuration page, it shows one or more vSphere server(s) in <em>CounterACT cannot connect to server state</em>.</td>
</tr>
<tr>
<td>VMW-470</td>
<td>The virtual machines from some ESXi hosts are not reported on the Enterprise Manager console. However, when testing a specific VMware vSphere server the vSphere server shows as successfully connected, and the number of virtual machines running on that vSphere server is correctly reported.</td>
</tr>
<tr>
<td>VMW-472</td>
<td>The vSphere Plugin is unable to resolve the ESXi host properties if the IP address of the ESXi host is not assigned to the same CounterACT appliance connected to vSphere server.</td>
</tr>
<tr>
<td>VMW-484</td>
<td>The VMware server instance UUID property is only available on the VMware vCenter Server, but not the ESXi host.</td>
</tr>
<tr>
<td>VMW-507</td>
<td>The descriptions in the policy templates were updated.</td>
</tr>
<tr>
<td>VMW-542</td>
<td>Removed support for vSphere 5.0 and 5.1 (EOL). Added support for vSphere 6.7.</td>
</tr>
<tr>
<td>VMW-543</td>
<td>Set Performance Measurement Period (hours) option was removed from the VMware vSphere Action list.</td>
</tr>
<tr>
<td>VMW-553</td>
<td>During the VMware server configuration, when the user entered an invalid server name, the vSphere Plugin did not display an <em>Invalid</em> error message.</td>
</tr>
</tbody>
</table>
Known Issues
This section describes the known issues for this release.

<table>
<thead>
<tr>
<th>Defect #</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>VMW-525</td>
<td>When configuring the vSphere server, the fully qualified domain name or IP address was required. Otherwise, the polling operation failed due to the session not being correctly saved and restored. If the certificate validation is enabled, the server name should be the same as the common name (CN) on the certificate.</td>
</tr>
<tr>
<td>VMW-536</td>
<td>When the vSphere Plugin sent a full poll request to the vSphere server, a response was not received and after three minutes, a SOAP Request Error message displayed. When this error occurs, the vSphere Plugin will abort the current operation and start the full poll at the next scheduled poll.</td>
</tr>
</tbody>
</table>

Feature Enhancements
- In the Add VMware vSphere Server wizard, the Query Interval field was removed and replaced with three new fields: Full Poll Interval, Delta Poll Interval, and Performance Data Poll. These changes help optimize vSphere context collection performance.
- You can now configure the VMware vSphere Plugin to validate the server certificate when it connects to the vSphere server. A server certificate issued by a Certificate Authority (CA) or a self-signed server certificate can be used. This capability helps with trusted communication between systems and leverages the Certificate Management functionality added to CounterACT in version 8.0.

[Tracked as VMW-506]

Upgrading the Module
New module releases may become available between CounterACT releases. This section describes how to install the module when a new release becomes available.

To install the module:
1. Navigate to one of the following ForeScout download portals, depending on the licensing mode your deployment is using:
   - Product Updates Portal - Per-Appliance Licensing Mode
   - Customer Portal, Downloads Page - Centralized Licensing Mode

To find out which licensing mode your deployment is working with, see Identifying Your Licensing Mode in the Console.
2. Download the module .fpi file.
3. Save the file to the machine where the CounterACT Console is installed.
4. Log into the CounterACT Console and select Options from the Tools menu.
5. Select Modules. The Modules pane opens.
6. Select Install. The Open dialog box opens.
7. Browse to and select the saved module .fpi file.
8. Select Install. The Installation screen opens.
9. Select I agree to the License Agreement to confirm that you have read and agree to the terms of the License Agreement, and select Install. The installation will not proceed if you do not agree to the license agreement.

- The installation will begin immediately after selecting Install, and cannot be interrupted or canceled.
- In modules that contain more than one component, the installation proceeds automatically one component at a time.

10. When the installation completes, select Close to close the window. The installed module is displayed in the Modules pane.

- Some components are not automatically started following installation.

Identifying Your Licensing Mode in the Console

If your Enterprise Manager has a ForeScout CounterACT See license listed in the Console, your deployment is operating in Centralized Licensing Mode. If not, your deployment is operating in Per-Appliance Licensing Mode.

Select Options > Licenses to see whether you have a ForeScout CounterACT See license listed in the table.

Contact your ForeScout representative if you have any questions about identifying your licensing mode.
Additional CounterACT Documentation

For information about other CounterACT features and modules, refer to the following resources:

- Documentation Downloads
- Documentation Portal
- CounterACT Help Tools

Documentation Downloads

Documentation downloads can be accessed from one of two ForeScout portals, depending on which licensing mode your deployment is using.

- **Per-Appliance Licensing Mode** - Product Updates Portal
- **Centralized Licensing Mode** - Customer Portal

*Software downloads are also available from these portals.*

To learn which licensing mode your deployment is using, see Identifying Your Licensing Mode in the Console.

Product Updates Portal

The Product Updates Portal provides links to CounterACT version releases, Base and Content Modules, and Extended Modules, as well as related documentation. The portal also provides a variety of additional documentation.

**To access the Product Updates Portal:**

2. Select the CounterACT version you want to discover.

Customer Portal

The Downloads page on the ForeScout Customer Portal provides links to purchased CounterACT version releases, Base and Content Modules, and Extended Modules, as well as related documentation. Software and related documentation will only appear on the Downloads page if you have a license entitlement for the software. The Documentation page on the portal provides a variety of additional documentation.

**To access documentation on the ForeScout Customer Portal:**

2. Select Downloads or Documentation.
Documentation Portal

The ForeScout Documentation Portal is a searchable, web-based library containing information about CounterACT tools, features, functionality and integrations.

- If your deployment is using Centralized Licensing Mode, you may not have credentials to access this portal.

To access the Documentation Portal:
2. Use your customer support credentials to log in.
3. Select the CounterACT version you want to discover.

CounterACT Help Tools

Access information directly from the CounterACT Console.

Console Help Buttons

Use context sensitive Help buttons to quickly access information about the tasks and topics you are working with.

CounterACT Administration Guide

Select CounterACT Help from the Help menu.

Plugin Help Files

1. After the plugin is installed, select Options from the Tools menu and then select Modules.
2. Select the plugin and then select Help.

Documentation Portal

Select Documentation Portal from the Help menu.

Identifying Your Licensing Mode in the Console

If your Enterprise Manager has a ForeScout CounterACT See license listed in the Console, your deployment is operating in Centralized Licensing Mode. If not, your deployment is operating in Per-Appliance Licensing Mode.

Select Options > Licenses to see whether you have a ForeScout CounterACT See license listed in the table.
Contact your ForeScout representative if you have any questions about identifying your licensing mode.
