

Version Information

CounterACT Operating System Update Pack 1.2.7.

Supported Forescout Software Versions

Customers who are working with the following Forescout software version can install the update pack:

- CounterACT 7.0.0

Requirements

- An active Maintenance Contract for CounterACT devices is required.
- Service Pack 3.0.2 or above. It is recommended to install the latest service pack to take advantage of the most current CounterACT updates.
- The kernel and JVM updates contained in this pack apply to all CounterACT devices, with the following exceptions:
 - CounterACT Devices implemented on hardware revision 10 and below
 - CT-R Appliances delivered before 2008

 *If you work with the Data Exchange (DEX) Plugin, you must install DEX Plugin version 3.0.4 or above before installing this pack. Earlier versions of the DEX Plugin are not compatible with this pack.*

What's New

This version contains fixed issues, security enhancements and known issues. See sections [Fixed Issues](#), [Security Enhancements](#) and [Known Issues](#).

Installing this release also installs fixes and enhancements provided in previous releases. See [Previous Releases](#) for more information. See [How to Install](#) for installation details.

Fixed Issues

This section describes the fixed issues in this release.

Issue	Description
OSUP-345 OSUP-366 OSUP-368 OSUP-372 OSUP-379 OSUP-380 OSUP-381	Updated CounterACT Linux kernel to the following versions: 2.6.32-754.12.3

Security Enhancements

This release of the CounterACT Operating System Update Pack includes updates that address security issues that are identified in, but not limited to, the following Common Vulnerabilities and Exposures (CVE):

CVE
CVE-2017-17805
CVE-2018-10902
CVE-2018-13405
CVE-2019-5489

Known Issues

This section describes known issues for this release.

Issue	Description
CIUP-619	When the CounterACT Operating System Update Pack (OSUP) is installed after the CounterACT Infrastructure Update Pack (CIUP), you must manually restart the CounterACT service to ensure that the 64 bit operating system package is up-to-date.
OSUP-193	When manually upgrading the Operating System Update Pack on the Standby node of a High Availability pair, two component services are not restarted. Workaround: If the services are off, run the following commands in the CLI to turn the services on: <pre>[Miniroot root@<hostname>]# chkconfig hainit --level 2345 on</pre> <pre>[Miniroot root@<hostname>]# chkconfig cman --level 2345 on</pre>
OSUP-173	When performing a blink test on the CounterACT hardware Ethernet ports, the blink test is not consistently successful following a backup restore. Workaround: Update the igb driver
OSUP-335	During installation of the OSUP Plugin, an error is written to the log, and the installation continues to completion.

How to Install

This section describes how to install the pack. No configuration is required.

Warnings and Recommendations

- [Upgrade Considerations and Issues](#)
- [Back Up Your System](#)

- [Installation Rollout](#)

Upgrade Considerations and Issues

Read the following sections before you upgrade to the current CounterACT OSUP version:

- [Upgrading with Service Pack version 3.0.2.5010](#)

Upgrading with Service Pack version 3.0.2.5010

The following articles describe the upgrade path and requirements for upgrading to Service Pack version 3.0.2.5010 with CounterACT Infrastructure Update Pack (CIUP) version 2.0.10 or above and CounterACT Operating System Update Pack (OSUP) version 1.2.4 or above:

- <https://forescout.force.com/support/articles/Knowledge/Upgrading-to-CounterACT-Service-Pack-3-0-2-5010-with-CIUP-2-0-10-and-OSUP-1-2-4/p>
- <https://forescout.force.com/support/articles/Knowledge/Supported-Upgrade-Paths-to-CounterACT-Service-Pack-3-0-2-5010-with-CIUP-2-0-10-and-OSUP-1-2-4/p>

Back Up Your System

It is recommended to back up the Enterprise Manager and Appliances before installing the pack.

Installation Rollout

If you are installing this pack for the first time, the system will reboot, temporarily putting the system into a more sensitive state. To protect against any unforeseeable reboot-related issues that may occur during this time, it is recommended to install the pack on CounterACT device/s that you have either physical or remote (such as RMM or iDRAC) access to.

If you are upgrading from an earlier version of the pack, no reboot occurs.

Installation Options

You can install the pack in the following ways:

- [Installing the Pack on All Appliances](#)
- [Installing the Pack on an Individual Appliance](#)
- [Installing the Pack on the Enterprise Manager Only](#)

Installing the Pack on All Appliances

To install the pack:

1. Navigate to the [Product Updates Portal, Product Downloads](#) page.
2. Select and save the plugin `.fpi` file.
3. In the Enterprise Manager Console, select **Options** from the CounterACT Console Tools menu.
4. Navigate to and select the Plugins folder. The Plugins pane opens.
5. Select **Install**. The Open dialog box opens.

6. Browse to and select the saved plugin `.fpi` file.
7. Select **Install**.

An installation or upgrade information dialog box and a license agreement dialog box will open. Accept the license agreement to proceed with the installation.

Installing the Pack on an Individual Appliance

You can limit the installation of the pack to individual Appliances by creating a file named `.osup_skip_install164` in the location specified below before starting the normal installation.

To install the pack:

1. Log in to the Enterprise Manager as root.
2. Run the following command:

```
touch /usr/local/forescout/etc/.osup_skip_install164
```
3. Run the following command:

```
fstool oneach -c touch /usr/local/forescout/etc/.osup_skip_install164
```

 *This command will not work if the SSH port (22/TCP) is not accessible from the Enterprise Manager to the Appliance.*
4. Open SSH to the Appliance you want to install the pack on.
5. Run the following command:

```
rm -f /usr/local/forescout/etc/.osup_skip_install164
```
6. Continue the installation as described in [Installing the Pack on All Appliances](#).

Installing the Pack on the Enterprise Manager Only

You can limit the installation of the pack to the Enterprise Manager alone (without automatically distributing it to all registered Appliances) by creating a file named `.osup_skip_install164` in the location specified below before starting the normal installation.

To install the pack:

1. Log in to the Enterprise Manager as root.
2. Run the following command:

```
fstool oneach -c touch /usr/local/forescout/etc/.osup_skip_install164
```

 *This command will not work if the SSH port (22/TCP) is not accessible from the Enterprise Manager to the Appliance.*
3. Continue the installation as described in [Installing the Pack on All Appliances](#).

Installing the Pack on High Availability Clusters

If you installed the Operating System Update Pack on a High Availability cluster, and the Standby node was later shut down and replaced, the new Standby node will not

automatically be updated with the pack after you synchronize the nodes. The CounterACT Linux kernel will remain 32bit. In such a case, to update the Standby node, you need to either manually run an fstool command or perform a failover from the Active node to the Standby node.

To update the pack on a replacement Standby node, perform one of the following:

- Manually run an fstool command:
 - a. Set up a CounterACT device as a High Availability Secondary node via the High Availability CounterACT Initial Setup. This node will serve as the replacement Standby node. Refer to the section in the *ForeScout CounterACT Resiliency Solutions User Guide for CounterACT Version 7.0.0* that describes High Availability CounterACT Device Setup for more information.
 - 📖 *During the installation procedure, the nodes are referred to as the Primary node and the Secondary node. The nodes are referred to as the Active node and the Standby node after installation and during operation, according to their current status.*
 - b. Log in to the Active Node as root and run the following command:

```
fstool osup ku_upgrade_passive
```
- Perform a failover from the Active node to the Standby node.
Refer to the section in the *ForeScout CounterACT Resiliency Solutions User Guide for CounterACT Version 7.0.0* that describes High Availability Failover triggers for more information.

More Plugin Information

Refer to the plugin configuration guide for more information about the plugin.

To access the plugin configuration guide:

1. After the plugin is installed, select **Options** from the Console **Tools** menu.
2. Navigate to and select the **Plugins** folder. The Plugins pane opens.
3. Select the plugin from the Plugins pane and then select **Help**.

More Release Information

This section provides information about the following topics:

- [Rollback Support](#)
- [Currently Available Releases](#)
- [Previous Releases](#)

Rollback Support

Under certain circumstances you may want to roll back the plugin to a previously installed release. This may happen, for example, if your system does not operate as expected after the plugin upgrade.

You can roll back this plugin to a previous version.

Currently Available Releases

You can view information about operating system update pack releases supported by specific CounterACT versions. To view, click the following link:

<http://updates.forescout.com/support/files/plugins/osup/Updates.pdf>

New features or fixes may be provided after this release. These items will be made available as Beta releases to the upcoming plugin version until the final version is posted on the Forescout Customer Support page.

In addition, you can contact the Forescout Beta Manager at beta@forescout.com to request the Beta plugin update with the fixes.

Previous Releases

Installing this release also installs fixes and enhancements provided in the releases listed in this section. To view Release Notes of previous version releases, see:

Additional CounterACT Documentation

For more detailed information about the CounterACT features described here or additional CounterACT features and modules, refer to the following resources:

- [Documentation Portal](#)
- [Product Updates Portal](#)
- [CounterACT Console Online Help Tools](#)

Documentation Portal

The Forescout Documentation Portal is a Web-based library containing information about CounterACT tools, features, functionality and integrations.

To access the Documentation Portal:

1. Go to https://updates.forescout.com/support/files/counteract/docs_portal/.
2. Use your customer support credentials to log in.
3. Select the CounterACT version you want to discover.

Product Updates Portal

The Product Updates Portal provides links to CounterACT version releases, service packs, plugins and modules as well as related documentation. The portal also provides a variety of How-to Guides, Installation Guides and more.

To access the Product Updates Portal:

1. Go to <https://updates.forescout.com/support/index.php?url=counteract>.
2. Select the CounterACT version you want to discover.

CounterACT Console Online Help Tools

Access information directly from the CounterACT Console.

Console Help Buttons

Use context sensitive *Help* buttons to quickly access information about the tasks and topics you are working with.

Console User Manual

Select **CounterACT Help** from the **Help** menu.

Plugin Help Files

1. After the plugin is installed, select **Options** from the **Tools** menu and then select **Plugins**.
2. Select the plugin and then select **Help**.

Documentation Portal

Select **Documentation Portal** from the **Help** menu.
