

Solution Architecture Subscription Package

The Forescout Solution Architecture Subscription includes both Architect and Project Management resources to assist with the design, evolution and expansion of your Forescout implementation. Our Solution Architecture team advises on best practices to enable you to make informed decisions when planning for or evolving an enterprise rollout of the Forescout platform capabilities.

By leveraging both planned strategic sessions and flexible access to Forescout Solution Architects, your organization can maximize its investment in professional services and facilitate your enterprise goals.

The Package

Subscription-based Services

Highly experienced Forescout Solution Architecture team deliver as required planning sessions focusing on customer priorities:

Key Technical Considerations

- Best practices and evolution of environment
- Changes within network and security environment
- Policy set analysis
- Inclusion of the newest Forescout releases
- Customer-specified technical needs

Highlights

Key Benefits

- <) Develop your enterprise solutions for device visibility, automated control and third-party orchestration with the help of Forescout's team of experts

Engagement Management

- Help assure overall engagement execution and provide a single point of contact throughout the engagement lifecycle
- Provide high-level oversight and business consultation to help ensure the successful delivery of services

Flexible Solution Architect Hours

In addition to the planning sessions described above, the Solution Architecture Subscription package may also be used to provide consulting services to assist with the following types of activities:

Assess and Strategize

- Assistance with business requirements and use cases
- Identification of stakeholders for technical and operational dependencies
- Design and scoping
- Determination of success criteria

Optimization

- Advice on custom policies to support your environment, deployment methodology and use cases
- Device visibility efforts (customization of endpoint discovery, classification and assessment)
- Control automation (customization, validation and testing of control policies)
- Orchestration (development, testing and tuning of orchestration policies as well as integration configuration and testing of third-party applications)

Documentation

- Assistance with the high-level design, low-level design and as-built documentation, as engagement time allows
