**ForeScout Appoints Former F5 Networks Sales Leader Myles Bray as VP EMEA**

**CAMPBELL, Calif. – 7 January 2016 –** ForeScout Technologies, Inc. announced today the appointment of Myles Bray as Vice President of EMEA Sales. Bray has significant experience building and developing EMEA-based sales teams, in fast-growing, channel-centric businesses.

Myles Bray joins ForeScout with a background in security and networking. During his tenure at F5 Networks, where he led the UK, Ireland and Africa region, Bray delivered significant double-digit growth, whilst substantially developing the partner and integrator ecosystem. Prior to F5, Bray held a number of sales leadership roles at VCE, the joint venture company founded by VMware, Cisco and EMC to deliver converged infrastructure for next generation data centre deployments. While at VCE, the company grew from startup to a billion dollar business with Europe, Middle East and Africa playing a major contribution. Before VCE, Bray was at storage giant EMC for eight years.

Myles Bray, ForeScout's VP of EMEA Sales, said: "I am thrilled to join ForeScout at this exciting time. Networks and users have become very dynamic, companies need to see what's connected to the network and be able to control that in order to secure their company assets. ForeScout is a recognised leader in this market—a market that is growing double digits year-on-year. I am eager and confident to deliver on the challenge to grow the ForeScout sales team and business in EMEA to the next level."

Brant Kennedy, Executive Vice President, Worldwide Sales at ForeScout, said: "I'm delighted to welcome Myles to the ForeScout team. With his expertise he'll be able to help us build out and scale a world-class sales organisation focused on customer success, and to boost our revenue still further in EMEA."

ForeScout helps organisations reduce their security vulnerabilities with comprehensive visibility for both agent and agentless devices, improve their security posture with multi-vendor orchestration and protect their valuable assets with automated enforcement. This combination is critical to address the security risks associated with the Internet of Things (IoT), Bring Your Own Device (BYOD) and the lack of integration across cybersecurity products.

**About ForeScout Technologies**
For Global 2000 enterprises and government organisations, ForeScout offers the unique ability to see devices the instant they connect to the network, control them and orchestrate information sharing and operation among disparate security tools. Unlike traditional security solutions, ForeScout achieves this without requiring software agents or previous device knowledge. ForeScout integrates with leading network, security, mobility and IT management products to overcome security silos, automate workflows and enable significant cost savings. As of October 2015, more than 2,000 customers in

over 60 countries are improving their network security and compliance posture with ForeScout solutions. http://www.forescout.com.
