ForeScout Delivers Extended Modules for the Palo Alto Networks Next-Generation Security Platform

- Integrated offering provides joint customers with increased visibility and control of traditional and IoT devices on enterprise networks.
- Wave of devices connecting to enterprise networks increases need for network segmentation.
- ForeScout’s Extended Modules help enterprises running on multi-vendor network infrastructures reduce the attack surface, dynamically segment resources, detect advanced threats and automate security response.

Through these new modules, ForeScout integrates its real-time device scanning with the Palo Alto Networks Next-Generation Security Platform, including its Next-Generation Firewall and WildFire™ cloud-based malware prevention service, to provide joint customers with improved visibility and control of their network-connected devices. This approach gives joint customers the ability to detect and prevent advanced threats, implement dynamic network segmentation, enforce access based on user, device and security context, and automate response to indicators of compromise (IOCs).

“IoT devices significantly increase the enterprise attack surface, allowing stealthy attacks to bypass security defenses and move laterally across flat networks to access corporate and proprietary information,” said Michael DeCesare, president and CEO, ForeScout. “By leveraging the integration between ForeScout and Palo Alto Networks, organizations will be able to see and control these devices for dynamic network segmentation and automated response. ForeScout works in the most complex multi-network environments without the need to rip and replace existing technologies so customers reduce costs and improve time-to-value.”

The Palo Alto Networks Next-Generation Firewall is architected to safely enable applications and prevent advanced cyber threats by classifying all traffic, including encrypted traffic, based on application, application function, user and content. Palo Alto Networks WildFire is the industry’s most advanced cloud-based analysis and prevention service for highly evasive zero-day malware and exploits.

In conjunction with ForeScout CounterACT, the ForeScout Extended Modules for Palo Alto Networks leverages complementary capabilities of each solution, which allows customers to:

- Gain comprehensive visibility into users and devices on their network without requiring an agent;
- Enforce access controls based on up-to-date user and device context;
• Implement dynamic network segmentation to reduce their attack surface;
• Detect advanced persistent threats (APTs) and scan for indicators of compromise (IOCs); and
• Automate threat response to limit malware proliferation and impact of breaches.

Supporting Quotes
“This offering gives organizations grappling with the proliferation of IoT a way to manage the devices that are increasingly finding their way into the enterprise. The integration between ForeScout and Palo Alto Networks provides joint customers with improved visibility and control of the devices connecting to their networks, enabling them to better prevent both known and unknown cyber threats.” — Chad Kinzelberg, senior vice president of Business and Corporate Development, Palo Alto Networks.

“As an office furniture company that strives for innovation and to continuously meet our customers’ needs, we are constantly on the lookout to integrate new technology into the workspaces we create. New devices bring about new challenges, which require a different approach to securing our Information Systems. The collaboration between ForeScout and Palo Alto Networks allows us to classify new devices, segment our networks by device in real time, and scan for indicators of compromise. Not only has this joint solution increased our security posture, but it has also augmented our ability to be agile by empowering the use of this technology and by allowing other support teams to use ForeScout’s single pane of glass approach to control devices on our network from one console.” — Joseph Cardamone, CISSP, Haworth.

About ForeScout Technologies, Inc.
ForeScout Technologies, Inc. helps make the invisible visible. Our company provides Global 2000 enterprises and government agencies with agentless visibility and control of traditional and IoT devices the instant they connect to the network. Our technology integrates with disparate security tools to help organizations accelerate incident response, break down silos, automate workflows and optimize existing investments.
