March 2019

Version Information

Forescout eyeExtend for Splunk® version 2.9.

This section describes requirements for this version.

Forescout Requirements

- Forescout version 8.1.
- A module license for Forescout eyeExtend for Splunk. See Forescout eyeExtend (Extended Module) Licensing Requirements for details.
- Verify that the following policies are active:
  - Classification
  - Compliance

  Host information determined by these policies is reported to Splunk and used in standard dashboards of the Forescout App for Splunk. Similarly, host information determined by other policies categorized as *Classification* or *Compliance* policies is reported to Splunk.
- For integration of the Forescout platform with Splunk, you must also install the ***Forescout App for Splunk*** in the applicable Splunk instance(s). See How to Install.

To categorize policies:

1. Select a policy for categorization from the Console, Policy tab and then select Categorize. The Categorize dialog box opens.
2. Select the category you need.
   - If you plan to send system health and network data, install and enable Hardware Inventory Plugin (v 1.0.2.2, delivered with the Endpoint Module version 1.1.0).
- For integration of the Forescout platform with Splunk, you must also install the ***Forescout App for Splunk*** in the applicable Splunk instance(s). See the *Forescout App & Add-ons for Splunk How-to Guide.*
  - This module is a component of Forescout eyeExtend for Splunk and requires a module license. See the *Forescout App & Add-ons for Splunk How-to Guide.*

Supported Vendor Requirements

- Splunk Enterprise version 6.4, 6.5, 6.6 or 7.0
- Splunk Enterprise Security version 4.5 or 4.7

Splunk Cloud Requirements

- Splunk Cloud Enterprise version 6.6.3
- Splunk data integration requires a Splunk Cloud license. Refer to: https://docs.splunk.com/Documentation/SplunkCloud/6.6.3/User/Datapolicies

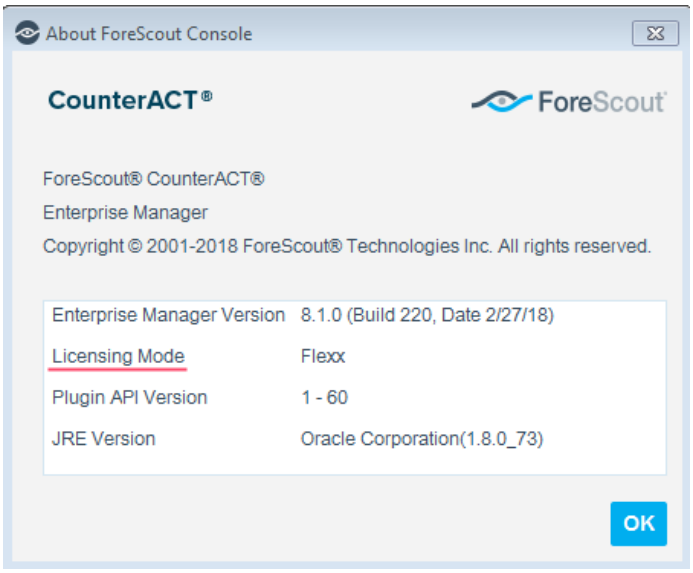
Forescout eyeExtend (Extended Module) Licensing Requirements

This Forescout eyeExtend product requires a valid license. Licensing requirements differ based on which licensing mode your deployment is operating in:

- Per-Appliance Licensing Mode
- Flexx Licensing Mode

To identify your licensing mode:

- From the Console, select **Help > About ForeScout**.



Per-Appliance Licensing Mode

When installing the module you are provided with a 90-day demo license.

If you would like to continue exploring the module before purchasing a permanent license, you can request a demo license extension. Consult with your Forescout representative before requesting the extension. You will receive email notification and alerts at the Console before the demo period expires.

To continue working with the module after the demo period expires, you must purchase a permanent module license.

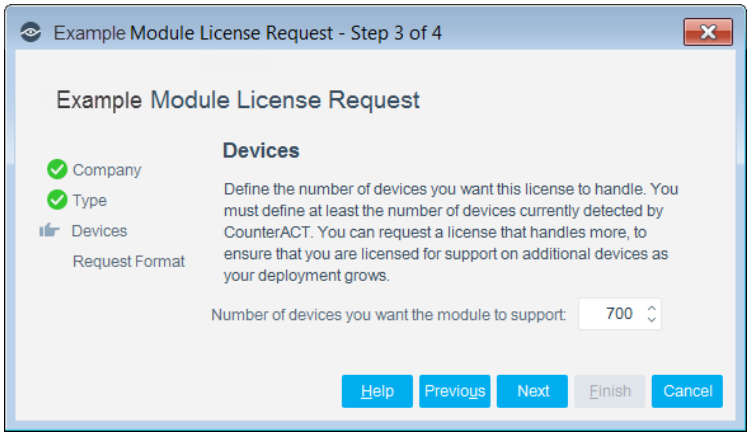
Demo license extension requests and permanent license requests are made from the Console.

This module may have been previously packaged as a component of an Integration Module which contained additional modules. If you already installed this module as a component of an Integration Module, you can continue to use it as such. Refer to the section about module packaging in the Forescout Administration Guide for more information.

Requesting a License

When requesting a demo license extension or permanent license, you are asked to provide the device *capacity* requirements. This is the number of devices that you want this license to handle. You must define at least the number of devices currently detected by the Forescout platform. You can request a license that handles more to ensure that you are licensed for support on additional devices as your deployment grows.

Enter this number in the **Devices** pane of the Module License Request wizard, in the Console Modules pane.



To view the number of currently detected devices:

1. Select the **Home** tab.
2. In the Views pane, select the **All Hosts** folder. The number in parentheses displayed next to the **All Hosts** folder is the number of devices currently detected.

Flexx Licensing Mode

When you set up your Forescout deployment, you must activate a license file containing valid licenses for each feature you want to work with in your deployment, including eyeExtend products. After the initial license file has been activated, you can

update the file to add additional eyeExtend licenses or change endpoint capacity for existing eyeExtend products. For more information on obtaining eyeExtend licenses, contact your Forescout sales representative.

- *No demo license is automatically installed during system installation.*

License entitlements are managed in the Forescout Customer Portal. After an entitlement has been allocated to a deployment, you can activate or update the relevant licenses for the deployment in the Console.

Each eyeExtend license has an associated capacity, indicating the number of endpoints the license can handle. The capacity of each eyeExtend license varies by module, but does not exceed the capacity of the Forescout eyeSight license.

- *Integration Modules, which package together groups of related licensed modules, are not supported when operating in Flexx Licensing Mode. Only eyeExtend products, packaging individual licensed modules are supported. T*he Open Integration Module is an *eyeExtend* product even though it packages more than one module*.*

More License Information

For more information on eyeExtend (Extended Module) licenses:

- **Per-Appliance Licensing**. Refer to the *Forescout Administration Guide*.
- **Flexx Licensing**. Refer to the *Flexx Licensing How-to Guide*.

You can also contact your Forescout sales representative for more information.

App & Add-ons Version Information

Forescout Apps & Add-ons for Splunk, version 2.7.0

App & Add-ons Requirements

This section describes requirements for this version.

Splunk Requirements

To integrate the Forescout platform with Splunk, the following needs to be installed:

- Create an account on Splunkbase.
- Splunk Enterprise version 6.4, 6.5, 6.6, or 7.0.
- Splunk Enterprise Security version 4.5 or 4.7.
- Splunk Processing Capacity - See Splunk Enterprise Capacity Planning Manual version 6.6.
- Splunk System Configuration - See Splunk Enterprise Distributed Deployment Manual, version 6.6.

- Splunk User Permissions - See About Users and User Roles version 6.6.

To integrate the Forescout platform with Splunk that ***does not*** run Splunk Enterprise Security (for more information, refer to the Splunk deployment guides at

https://docs.splunk.com/Documentation/Splunk/6.6.3/Installation/SystemRequirements

Splunk Cloud Requirements

- Splunk Cloud Enterprise version 6.6.3
- Splunk data integration requires a Splunk Cloud license. Refer to:

  https://docs.splunk.com/Documentation/SplunkCloud/6.6.3/User/Datapolicies

External Requirements

This section describes system requirements, including:

- External Systems Connections
- Forescout App for Splunk Enterprise (on-premise) Communication Requirements

Splunk Enterprise Security works best using Google Chrome. Microsoft no longer supports Internet Explorer 9 and 10. Because of this, Splunk has ended its support for Splunk Web. When you upgrade, be sure to use Internet Explorer 11 or later. An alternative is to use another browser that Splunk supports.

Supported Forescout Versions

Customers who are working with the following Forescout version can install the module:

- Forescout version 8.1.

External Systems Connections

This section covers the Forescout-related installation and configuration.

Install the Forescout Platform

The Forescout platform must be installed and configured in order to get data into Splunk. Contact your Forescout team for more details or reach out to:

support@forescout.com

Install Forescout eyeExtend for Splunk

Forescout eyeExtend for Splunk must be installed and configured in order to get data into Splunk. Contact your Forescout team for more details or reach out to:

support@forescout.com

After installing Forescout eyeExtend for Splunk, you will need to do the following:

- ***Establish Connection to Splunk***- this establishes a connection between your CounterACT® Appliance and a Splunk Instance.
- ***Test your Configuration*** - test your connection between your CounterACT Appliance and a Splunk Instance.

For more information on how to use Forescout eyeExtend for Splunk, refer to the *Forescout eyeExtend for Splunk Configuration Guide*.

Forescout App for Splunk Enterprise (on-premise) Communication Requirements

The integration of the Forescout platform with Splunk is based on the following data sharing/messaging interactions.

Before installing, be sure the recommended ports are allowed by the firewall.

Communication	Recommended	Alternative
Retrieve Action Info The Forescout App for Splunk polls the Forescout action_info API to retrieve a list of available actions.	REST API Default port: 443	REST API on HTTP
Ongoing Data Reporting The Forescout platform sends endpoint data to Splunk. This is the protocol used by Forescout eyeExtend for Splunk to implement the **Splunk: Send Update from CounterACT** action.	Event Collector Default port: 8088	Syslog (port 515/TCP/UDP) RESTful API HTTPS (8089)
Splunk Action Request ▪ Splunk sends alerts to the Forescout platform's alert API. ▪ The alert API confirms receipt of alert message (Synchronous response).	REST API Default port: 443	REST API on HTTP
Splunk Action Final Status The Forescout platform reports the status of actions requested by Splunk (Asynchronous response).	Event Collector Default port: 8088	Syslog (port 515/TCP/UDP) RESTful API HTTPS (8089)

After installing, ensure that HTTP Listener is enabled (disabled by default.)

About This Release

This release:

- Supports the ability to enable and disable server certificate validation.

- Supports Certification Compliance mode. For information about this mode, refer to the *Forescout Installation Guide*.

This version contains important Fixed Issues and Known Issues.

Installing this release also installs fixes and enhancements provided in previous releases. See Previous Releases for more information. See How to Install for installation details.

Fixed Issues

There are no fixed issues for this release.

Known Issues

This section describes known issues for this release.

Defect #	Description
SPL-523	When the Splunk server certificate is revoked, a **Test** fails due to certificate revocation, but the policy still succeeds. The workaround is to perform a **Test** after setting up a connection.

How to Install

To install the module:

1. Navigate to one of the following Forescout download portals, depending on the licensing mode your deployment is using:
   - Product Updates Portal - ***Per-Appliance Licensing Mode***
   - Customer Portal, Downloads Page - ***Flexx Licensing Mode***

   To identify your licensing mode, select **Help > About ForeScout** from the Console.
2. Download the module `.fpi` file.
3. Save the file to the machine where the Console is installed.
4. Log into the Console and select **Options** from the **Tools** menu.
5. Select **Modules**. The Modules pane opens.
6. Select **Install**. The Open dialog box opens.
7. Browse to and select the saved module `.fpi` file.
8. Select **Install**. The Installation screen opens.
9. Select **I agree to the License Agreement** to confirm that you have read and agree to the terms of the License Agreement, and select **Install**. The installation will not proceed if you do not agree to the license agreement.

- *The installation will begin immediately after selecting Install, and cannot be interrupted or canceled.*
- *In modules that contain more than one component, the installation proceeds automatically one component at a time.*

10. When the installation completes, select **Close** to close the window. The installed module is displayed in the Modules pane.
    - *Some components are not automatically started following installation.*

More Release Information

This section provides additional release information.

Rollback Support

Rollback is not available for this module. This means that if you upgrade to this module version and the module does not operate as expected, you cannot roll it back to a previous release.

Previous Releases

Installing this release also installs fixes and enhancements provided in the releases listed in this section. To view Release Notes of previous version releases, see:
